Highlights

- Consumer prices rose 1.9% in the 12 months to January 2010, following a 1.3% increase in December 2009. On a seasonally adjusted monthly basis, prices rose 0.4% from December to January.

Briefing notes

Highlights:

- Consumer prices rose 1.9% in the 12 months to January 2010, following a 1.3% increase in December 2009. On an unadjusted monthly basis, consumer prices rose 0.3% from December to January, after falling 0.3% from November to December.

All-items Consumer Price Index (CPI):

- The rise in the all-items CPI was due mostly to gasoline prices. Consumers paid 23.9% more at the pump in January than they did a year earlier, compared with a 25.6% increase in December.
- Energy prices rose 8.2% between January 2009 and January 2010, after rising 5.9% in December.
- Prices for purchase of passenger vehicles increased 3.1% on a year-over-year basis in January, following a 3.3% decline in December.
- All major components in the CPI, except shelter and clothing and footwear, recorded increases in January.
- Upward pressure on the 12-month change came primarily from higher prices for transportation (+7.7%), food (+1.4%), and household operations, furnishings and equipment (+2.1%).

Main contributors to the 12-month change in the CPI:

Main upward contributors:

- Gasoline (+23.9%)
- Passenger vehicle insurance premiums (+7.7%)
- Purchase of passenger vehicles (+3.1%)
- Property taxes (+4.3%)
- Food purchased from restaurants (+2.6%)

Main downward contributors:

- Mortgage interest cost (-5.5%)
- Natural gas (-21.4%)
- Women's clothing (-6.8%)
- Fresh vegetables (-7.7%)
- Video equipment (-17.9%)

Main contributors to the monthly change in the CPI, not seasonally adjusted:

Main upward contributors:

- Gasoline (+3.6%)
- Natural gas (+7.2%)
- Non-alcoholic beverages (+9.1%)
- Purchase of passenger vehicles (+1.0%)
- Telephone services (+1.3%)

Main downward contributors:

- Travel tours (-18.6%)
- Mortgage interest cost (-0.4%)
- Sporting equipment (-6.0%)
- Fresh vegetables (-1.9%)
- Electricity (-0.6%)

Analysis

Consumer prices rose 1.9% in the 12 months to January 2010, following a 1.3% increase in December 2009. January's increase was the largest since November 2008.

Chart 1

The 12-month change in the Consumer Price Index (CPI) and the CPI excluding energy

The increase in the all-items Consumer Price Index (CPI) was due primarily to gasoline prices. In January 2010, gasoline prices were 23.9% higher than they were in January 2009. This follows a 25.6% rise in the 12 months to December 2009.

Gasoline prices exerted upward pressure on the CPI for the third consecutive month due to price volatility in the second half of 2008 and the first half of 2009. Prices at the pump have been relatively stable since July 2009.

Chart 2
Evolution of the gasoline price index since 2007

index (2002=100)

Overall, energy prices went up 8.2% between January 2009 and January 2010, following a 5.9% increase in the 12 months to December 2009.

Excluding energy, the CPI rose 1.3% in the 12 months to January, compared with a 0.8% increase posted in December.

As well, prices for the purchase of passenger vehicles exerted upward pressure on the CPI in January, after an extended period in which they were a significant source of downward pressure on the CPI.

12-month change: Six of the eight major components in the CPI post increases

In January, six of the eight major components of the CPI recorded price increases. The exceptions were shelter, and clothing and footwear.

Chart 3

Transportation continues to exert the most upward pressure on the Consumer Price Index

Prices in the transportation component exerted the strongest upward pressure on the all-items CPI, increasing 7.7% in the 12 months to January. This was the largest 12-month increase for this component since the 9.2% increase in September 2005.

In addition to higher prices at the pump, consumers paid 7.7% more for passenger vehicle insurance premiums. As well, prices for the purchase of passenger vehicles rose 3.1% in January, following a 3.3% decline in December. January's increase in passenger vehicle prices was the first 12-month rise since June 2007.

Food prices advanced 1.4%, following a 1.7% increase in December. January's rise was the smallest since April 2008.

Upward pressure on the food index came mainly from prices for food purchased from restaurants (+2.6%) and non-alcoholic beverages (+7.2%).

Other major contributors to the increase in food prices were all other food preparations and sugar and confectionery. On the other hand, prices fell for fresh fruit, fresh vegetables, and meat.

Prices in the household operations, furnishing and equipment component rose 2.1%. Upward pressure came from communications, other household goods and services, and child care and domestic services.

Broad-based price advances occurred in the health and personal care component (+3.1%).

Prices in the recreation, education and reading component increased 1.4% in the 12 months to January. Major contributors to the increase were tuition fees and cablevision and satellite services. In contrast, prices fell for home entertainment equipment, parts and services and computer equipment and supplies.

Shelter costs declined 1.1% during the 12-month period, mostly the result of declines in mortgage interest cost and natural gas prices.

The mortgage interest cost index, which measures the change in the interest portion of payments on outstanding mortgage debt, fell 5.5% in January, following a 4.9% decrease in December.

Upward pressure on the shelter component came from property taxes (+4.3%) and rent (+1.4%).

Prices for clothing and footwear dropped 1.9% on a year-over-year basis. The strongest downward pressure in this component came from prices for women's clothing (-6.8%) and children's clothing (-4.8%).

Provinces: Consumer prices up in all provinces

Consumer prices were up in all provinces in the 12 months to January. The most significant upward pressure on prices in all provinces came from higher gasoline prices.

The largest year-over-year increases among provinces occurred in Atlantic Canada: Prince Edward Island (+4.0%), New Brunswick (+3.9%), Newfoundland and Labrador (+3.2%), and Nova Scotia (+3.1%).

Higher price rises in Atlantic Canada were primarily attributed to larger upward movements in gasoline prices. Gasoline price increases in Atlantic Canada ranged from 26.5% in Newfoundland and Labrador to 35.6% in New Brunswick.

As well, prices for fuel oil and other fuels in Canada advanced 9.7% between January 2009 and January 2010, the largest increase since October 2008. These energy products are widely used in home heating in Atlantic Canada, while the rest of the country relies mostly on electricity and natural gas.

Chart 4

Atlantic provinces posted higher price increases than other provinces

In Ontario, prices rose 1.9%. This was due primarily to higher prices for gasoline, passenger vehicle insurance, and the purchase of passenger vehicles. Downward pressure came from lower prices for natural gas.

In Alberta, consumer prices went up 1.7%. Major contributors to higher prices were the cost of gasoline and natural gas.

Prices in British Columbia rose 0.7%, with gasoline prices up 18.4%. At the same time, shelter costs fell 2.4%, more than twice the rate of the decline of 1.1% at the national level.

Month-over-month seasonally unadjusted CPI increases

Consumer prices prior to seasonal adjustment increased 0.3% from December to January, after falling 0.3% from November to December.

Five of eight major components of the CPI recorded month-over-month increases in January: transportation; shelter; food; household operations, furnishings and equipment; and health and personal care.

Monthly increases in transportation prices (+1.5%) were driven by private transportation, particularly gasoline (+3.6%) and the purchase of passenger vehicles (+1.0%).

Shelter costs rose 0.4% in the wake of month-over-month increases in prices for natural gas, water, and fuel oil and other fuels. On the other hand, declines in mortgage interest cost and electricity dampened the increase in the shelter index.

Increases in the household operations, furnishings and equipment index (+0.4%) were mainly due to upward price movements for telephone services (+1.3%).

The food index went up 0.4% from December to January. Major contributors to the higher food prices were non-alcoholic beverages, other fresh fruit, and all other food preparations. On the other hand, prices for lettuce and oranges declined.

In contrast, recreation, education and reading (-1.7%) exerted the most downward pressure on the monthly CPI. The most significant contributor to the decline was the cost of travel tours.

Seasonally adjusted monthly CPI increases

On a seasonally adjusted monthly basis, the CPI rose 0.4% from December to January, after remaining unchanged from November to December. January's increase was due mainly to a 1.5% increase in the transportation index.

The seasonally adjusted monthly CPI has increased in six of the past eight months.

12-month change in the Bank of Canada's core index

The Bank of Canada's core index advanced 2.0% over the 12 months to January, following a 1.5% rise in December. The increase was due primarily to a rise in prices for the purchase of passenger vehicles in January.

On a month-to-month basis, the core index prior to seasonal adjustment increased 0.1% from December to January.

The seasonally adjusted monthly core index went up 0.2% from December to January, after posting no change from November to December.

Data quality, concepts and methodology

Definition

The Consumer Price Index (CPI) is an indicator of the changes in consumer prices experienced by the target population. The CPI measures price change by comparing, through time, the cost of a fixed basket of commodities. This basket is based on the expenditures of the target population in a certain reference period, currently 2005. Since the basket contains commodities of unchanging or equivalent quantity and quality, the index reflects only pure price movements.

Separate CPIs are published for Canada, the ten provinces, Whitehorse, Yellowknife and Iqaluit. Some CPI information is also available for an additional sixteen urban centres. Since the CPI is a measure of price change from one time period to another, it cannot be used to indicate differences in price levels between provinces or urban centres.

Population coverage

The population targeted by the Consumer Price Index consists of families and individuals living in urban and rural private households. For practical reasons, residents of the Territories outside Whitehorse, Yellowknife and Iqaluit are not represented by the index. Prior to February 1995, the target population consisted of private households in Canadian urban centres with a population of 30,000 or more.

Time reference

The CPI compares, in percentage terms, prices in any given time period to prices in the official base period which, at present, is 2002=100. The official time base was changed from 1992=100 to 2002=100 starting with the CPI for May 2007. The change is strictly an arithmetic conversion which alters the index levels but leaves the percentage changes between any two periods intact, except for differences in rounding.

Percent versus index point changes

The movements of the indexes from one month to another are expressed as percent changes rather than changes in index points. Index point changes are affected by the level of the index which, in turn, depends on the time base of the particular index. The percentage change between any two time periods can be readily calculated by dividing the index point difference between the two time periods by the index for the earlier period and multiplying the result by one hundred.

Price coverage

The prices used in the CPI calculation are final prices, inclusive of excise and other indirect taxes paid by consumers. In particular, they include the Goods and Services Tax (GST), as well as provincial retail sales taxes wherever applicable. In regions where the GST and provincial retail sales taxes have been combined, the Harmonized Sales Tax (HST) is included. It follows that the CPI can change as a result of modifications to any of these taxes.

The selection of commodities and the outlets from which prices are collected is judgmental, other than for rents and traveler accommodation. The number of prices required for a given commodity depends on the importance and the nature of the commodity. The samples are designed to represent volume selling commodities and outlets.

The principal objective of the sample design is to ensure an informative, reliable and impartial picture of consumer inflation at the national and provincial levels.

Price collection for a given month's index is carried out during the first three weeks of the month. Although prices for most CPI commodities are collected monthly, prices for commodities having less frequent price changes (e.g. property taxes and electricity rates) are collected at intervals longer than one month. Special pricings are carried out where there is evidence that significant price changes have occurred between scheduled pricing periods.

Weights and linking

The CPI maintains fixed quantitative proportions (weights) between commodities during the life of a given basket. The baskets are updated periodically to take into account changes in consumer expenditure patterns. In May 2007, the basket reflecting the 2005 expenditure patterns replaced the 2001 basket. The continuity of the CPI series is maintained by "linking" the corresponding indexes obtained from consecutive baskets.

The CPI is calculated as a weighted average of specified commodity price indexes. The weights are derived from Survey of Household Spending data. Text table 1 compares the expenditure shares of the two most recent CPI baskets, i.e. the 2005 basket as it was reflected in the CPI in May 2007 and the 2001 basket. Because both sets of weights are expressed in April 2007 or "link month" prices, the differences reflect the shifts in the relative quantities purchased between the two baskets.

When reconstructing or re-aggregating published CPI series, the changes in weights and the linking procedures must be taken into account. For a description of the methodology required to reconstruct or re-aggregate CPI series, see **The Consumer Price Index Reference Paper** catalogue no. 62-553-X (Occasional) or contact Prices Division.

Text table 1

Comparison of the 2005 and 2001 distribution¹ of expenditures used in the Consumer Price Index, by major component, for Canada

	2005 Expenditures		2001 Expenditures
	Expressed in 2005 prices	Expressed in April 2007 prices	Expressed in April 2007 prices
	percent		
Major Components			
All-items	100.0	100.0	100.0
Food	16.9	17.0	17.1
Shelter	25.7	26.6	27.7
Household operations, furnishings and equipment	11.4	11.1	10.2
Clothing and footwear	5.6	5.4	5.1
Transportation	19.6	19.9	20.2
Health and personal care	4.8	4.7	4.4
Recreation, education and reading	13.0	12.2	11.2
Alcoholic beverages and tobacco products	3.1	3.1	4.2

1. Figures may not add to 100% due to rounding.

Starting with the October 2006 Consumer Price Index (CPI), Statistics Canada produces and disseminates the Core CPI as defined by the Bank of Canada.

The measure of Core CPI excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on Core CPI, please consult the Bank of Canada Web site. <http://www.bankofcanada.ca/en/inflation/index.htm>.

Statistics Canada also calculates, on behalf of the Bank of Canada, a seasonally adjusted Core CPI. This series is available through *CANSIM*, Statistics Canada's official database, or by contacting us through the means mentioned on the inside cover of this publication.

Whitehorse, Yellowknife and Iqaluit indexes

The relatively small size of the housing market in these three cities makes it difficult to construct reliable price indexes for new houses. To compensate, the price movements of rental accommodation are used to approximate the price movements of new houses. The rent information itself is collected using different pricing frequencies and collection methods than in the rest of the country. Because of these problems, the indexes for Rented Accommodation and Owned Accommodation are not published for these three cities. Further, the all-items indexes published for these three cities are not strictly comparable with the same indexes for the provinces or the other sixteen cities.

Calculation of urban centre indexes

With the introduction of the 1992 basket, emphasis was shifted from urban centre data to provincial data. Urban Centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of Shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart (or, in the cases of Montréal, Toronto, and Vancouver, a sub-provincial counterpart) is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.

Seasonal adjustment

A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as variations in climate and regular institutional events such as vacations and statutory holidays. Seasonally adjusted series are calculated using Statistics Canada's X-11 ARIMA program. Time series with no detectable seasonal movements remain unchanged from the official series. The official unadjusted series for all-items index, core consumer price index, each of the eight major component indexes and three special aggregates (all-items excluding food, all-items excluding food and energy and all-items excluding 8 of the most volatile components (Bank of Canada definition)) are seasonally adjusted independently.

Each month, the previous month's seasonally adjusted index is subject to revision. On an annual basis, the seasonally adjusted values for the last three years are revised with the January data release. Since these revisions can lead to changes in both the levels and movements of the indexes, users employing the CPI for indexation purposes are advised to use the unadjusted indexes.

Explanatory notes for tables

and

Table 2 The Consumer Price Index, major components and special aggregates, Canada, seasonally adjusted

1. 2005 Consumer Price Index (CPI) basket weights at April 2007 prices, Canada.
2. Figures may not add to 100% due to rounding.
3. The measure of core consumer price index (CPI) excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on core CPI, please consult the Bank of Canada Web site: <http://www.bankofcanada.ca/en/inflation/index.htm>.

Table 3 The Consumer Price Index, provinces, Whitehorse, Yellowknife and Iqaluit, not seasonally adjusted

1. Data for Iqaluit are on a December 2002=100 base (200212=100) and the Standard Geographical Classification (SGC) 2001. Previous to April 1, 1999, the town of Iqaluit formed part of the Northwest Territories. Subsequent to April 1, 1999, the town of Iqaluit formed part of the newly-created territory of Nunavut.

Table 4 The Consumer Price Index, major components and selected sub-groups, Canada, not seasonally adjusted

Table 4-1

1. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.

Table 4-2

1. In July 2004, the 2001 basket weights introduced with the January 2003 data were adjusted; the weights for mortgage interest cost were re-evaluated.
2. Due to changes in the Ontario electricity market that became effective May 1, 2002, it was necessary to adjust the treatment of electricity prices in the consumer price index (CPI) for that province. A question and answer fact sheet that explains those changes is now available. To obtain the fact sheet on the treatment of electricity prices in Ontario, please contact Client Services Unit, Prices Division, telephone: (613) 951-9606, toll-free: 1-866-230-2248, fax: (613) 951-2848, e-mail: prices-prix@statcan.gc.ca.

Table 4-5

1. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 4-7

1. From April 2006, Statistics Canada changed its implementation of the price index formula used for traveller accommodation. As a result, data from April 2006 are not strictly comparable to earlier time periods.

Table 5 The Consumer Price Index for Canada, all-items, not seasonally adjusted, historical data

1. The annual average index is calculated as the average of the published 12 individual monthly indexes, rounded to one decimal place. Percentage changes between the annual average indexes are calculated based on these published rounded numbers. Between May 2007 and September 2007, the annual average percentage changes in Table 5 were calculated based on annual average indexes that were not rounded. As a result, some percentage changes were different by +/- 0.1 from the official percentage change. This problem only affected the annual average column of Table 5.

Table 6 Core consumer price index (CPI) (Bank of Canada definition), not seasonally adjusted, historical data

1. The measure of core consumer price index (CPI) excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on core CPI, please consult the Bank of Canada Web site: <http://www.bankofcanada.ca/en/inflation/index.htm>.
2. The annual average index is calculated as the average of the published 12 individual monthly indexes, rounded to one decimal place. Percentage changes between the annual average indexes are calculated based on these published rounded numbers.

Table 7 The Consumer Price Index for Canada, major components and special aggregates, not seasonally adjusted, historical data

1. Goods are physical or tangible commodities usually classified according to their life span into non-durable goods, semi-durable goods and durable goods. Non-durable goods are those goods that can be used up entirely in less than a year, assuming normal usage. For example, fresh food products, disposable cameras and gasoline are non-durable goods. Semi-durable goods are those goods that may last less than 12 months or greater than 12 months depending on the purpose to which they are put. For example, clothing, footwear and household textiles are semi-durable goods. Durable goods are those goods which may be used repeatedly or continuously over more than a year, assuming normal usage. For example, cars, audio and video equipment and furniture are durable goods.
2. A service in the consumer price index (CPI) is characterized by valuable work performed by an individual or organization on behalf of a consumer, for example, car tune-ups, haircuts and city public transportation. Transactions classified as a service may include the cost of goods by their nature. Examples include food in restaurant food services and materials in clothing repair services.
3. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".

4. The annual index level is the average of the 12 individual monthly indexes.

Table 8 Annual average percentage changes for the Consumer Price Index

Table 8-1 and 8-2

1. The annual index level is the average of the 12 individual monthly indexes. The percentage change for a given calendar year is calculated using the annual average indexes.

Table 9 The Consumer Price Index, major components, selected sub-groups and special aggregates, provinces, Whitehorse and Yellowknife, not seasonally adjusted

Tables 9-1, 9-2, 9-3, 9-4, 9-5, 9-7, 9-8, 9-9, 9-10 and 9-11

1. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".
2. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.
3. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 9-6

1. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".
2. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.
3. Due to changes in the Ontario electricity market that became effective May 1, 2002, it was necessary to adjust the treatment of electricity prices in the consumer price index (CPI) for that province. A question and answer fact sheet that explains those changes is now available. To obtain the fact sheet on the treatment of electricity prices in Ontario, please contact Client Services Unit, Prices Division, telephone: (613) 951-9606, toll-free: 1-866-230-2248, fax: (613) 951-2848, e-mail: prices-prix@statcan.gc.ca.
4. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 9-12

1. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".

2. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.
3. Part of the increase first recorded in the shelter index for Yellowknife for December 2004 inadvertently reflected rent increases that actually occurred earlier. As a result, the change in the shelter index was overstated in December 2004, and was understated in the previous two years. The shelter index series for Yellowknife has been corrected from December 2002. In addition, the Yellowknife all-items consumer price index (CPI) and some Yellowknife special aggregate index series have also changed. Data for Canada and all other provinces and territories were not affected.
4. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 10 The all-items Consumer Price Index, provinces, Whitehorse, Yellowknife and Iqaluit, not seasonally adjusted, historical data

1. Data for Iqaluit are on a December 2002=100 base (200212=100) and the Standard Geographical Classification (SGC) 2001. Previous to April 1, 1999, the town of Iqaluit formed part of the Northwest Territories. Subsequent to April 1, 1999, the town of Iqaluit formed part of the newly-created territory of Nunavut.
2. The annual index level is the average of the 12 individual monthly indexes.

Table 11 The Consumer Price Index and selected sub-groups, by urban centre, not seasonally adjusted

1. With the introduction of the 1992 basket in January 1995, emphasis was shifted from urban centre data to provincial data. Urban centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart is used except in the cases of Montréal, Toronto, and Vancouver, where a sub-provincial counterpart is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.
2. Users of the urban centre indexes should note that, effective July 2007, Statistics Canada has corrected the weights of some urban centres that were in error in the Consumer Price Index 2005 basket update. The weights of St. John's, Charlottetown, Halifax, Saint John, Québec City, Montréal, Ottawa, Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary and Victoria were adjusted, while those of Toronto, Vancouver, Whitehorse, Yellowknife and Iqaluit were not. With this correction, the July 2007 level of each urban centre index has been restored to reflect the correct movement for May 2007 and June 2007. The published urban centre indexes for May and June 2007 will remain unchanged. The calculation of urban centre indexes is separate from the calculation of the provincial and national indexes. Therefore, the correction made to the urban centre weights has no effect at all on the provincial or national indexes. Published weight documentation was also not affected.
3. Formerly Ottawa (Ottawa-Gatineau, Ontario part), represents Ottawa only.

Table 12 The all-items Consumer Price Index by urban centre, not seasonally adjusted, historical data

1. With the introduction of the 1992 basket in January 1995, emphasis was shifted from urban centre data to provincial data. Urban centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart is used except in the cases of Montréal, Toronto, and Vancouver, where a sub-provincial counterpart is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.
2. Users of the urban centre indexes should note that, effective July 2007, Statistics Canada has corrected the weights of some urban centres that were in error in the Consumer Price Index 2005 basket update. The weights of St. John's, Charlottetown, Halifax, Saint John, Québec City, Montréal, Ottawa, Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary and Victoria were adjusted, while those of Toronto, Vancouver, Whitehorse, Yellowknife and Iqaluit were not. With this correction, the July 2007 level of each urban centre index has been restored to reflect the correct movement for May 2007 and June 2007. The published urban centre indexes for May and June 2007 will remain unchanged. The calculation of urban centre indexes is separate from the calculation of the provincial and national indexes. Therefore, the correction made to the urban centre weights has no effect at all on the provincial or national indexes. Published weight documentation was also not affected.
3. The annual index level is the average of the 12 individual monthly indexes.

Table 14 Average retail prices, monthly, Canada

1. Prices are expressed in dollars, except for the price of gasoline which is expressed in cents per litre.

Average retail prices for food, household supplies, personal care items, cigarettes and gasoline

Table 14 shows, for the current month and the two previous months, average prices for selected food, household supplies, personal care items, cigarettes and for gasoline.

Prices for these items are collected as part of the regular monthly CPI survey. Prices for the selected food, household supply and personal care items are observed in food supermarkets, while prices for cigarettes are collected in supermarkets, department stores, drug stores and tobacco shops. Average prices for each commodity are calculated as a weighted average of the average prices in the observed urban centres using the population of these urban centres as weights.

The commodities which are priced can vary in quality between outlets or between urban centres. This is the reason why average prices are not published for each of those urban centres. Brands and outlets can also vary from month to month. Therefore, average prices may not necessarily be fully comparable from one month to another and should not be used as an appropriate measure of pure price change through time. A matched commodity and outlet sample is used for the CPI to determine the pure price movement of commodities through time.

Table 15 Inter-city indexes of retail price differentials, as of October 2008, for selected groups of consumer goods and services, not seasonally adjusted

Purpose and Scope

Table 15 shows estimates of retail price differences between 11 Canadian cities in all 10 provinces, as of October 2008. These estimates are based on a selection of commodities (goods and services) purchased by consumers in each of the 11 cities.

These estimates should not be interpreted as a measure of differences in the cost-of-living between cities. The indexes provide price comparisons for a selection of commodities only, and are not meant to give an exhaustive comparison of all goods and services purchased by consumers. Additionally, the shelter price concept used for these indexes is not conducive to making cost-of-living type comparisons between cities (see below).

Methodology

In order to produce optimal Inter-city indexes, commodity comparisons were initially made by pairing cities that are in close geographic proximity. The resulting price level comparisons were then extended to include comparisons between all of the cities, using a chaining procedure. The following initial pairings were used:

St. John's	Halifax
Charlottetown-Summerside	Halifax
Saint John	Halifax
Ottawa	Halifax
Toronto	Montreal
Ottawa	Toronto
Toronto	Winnipeg
Regina	Winnipeg
Edmonton	Winnipeg
Edmonton	Vancouver

Reliable Inter-city price comparisons require that the selected commodities be very similar across cities. This ensures that the variation in index levels between cities is due to pure price differences and not to differences in the attributes of the commodities, such as size and/or quality.

Within each city pair, commodity price quotes were matched on the basis of detailed descriptions. Whenever possible, commodities were matched by brand, quantity and with some regard for the comparability of retail outlets from which they were selected.

Additionally, the target prices for this study are final retail prices and as such, include all sales taxes and levies applied to consumer commodities within a city. This can be an important source of variation when explaining differences in inter-city price levels.

It should be noted that price data for the Inter-city indexes is drawn from the sample of monthly price data collected for the Consumer Price Index (CPI). Given that the CPI sample is optimized to produce accurate price comparisons through time, and not across regions, the number of matched price quotes between cities can be small. It should also be noted that, especially in periods when prices are highly volatile, the timing of the commodity price comparison can significantly affect city-to-city retail price relationships.

The weights used for aggregating the city indexes into the all-items Inter-city index are based on the expenditures of consumers living in each of the 11 cities. The weights are currently based on 2005 consumer expenditure data.

The all-items Inter-city index for a particular city is compared to the average of all 11 cities, which is equal to 100. For example, an index value of 102 for a particular city means that prices for the measured commodities are 2% higher than the weighted, combined city average.

Additional Information on Shelter

Shelter prices were absent from the Inter-city index program prior to 1999 because of methodological and conceptual issues associated with their measurement. The diverse nature of shelter means that accurate matches between cities are often difficult to make.

To account for some of these difficulties, a rental equivalence approach is used to construct the Inter-city price indexes for owned accommodation. Such an approach uses market rents as an approximation to the cost of the shelter services consumed by homeowners in each city. It is important to note that this approach may not be suitable for the needs of all users. For instance, since the rental equivalence approach does not represent an out-of-pocket expenditure, the indexes should not be used for measuring differences in the purchasing power of homeowners across cities.

Footnotes for Table 15

1. The weights shown are rounded 2005 basket weights at April 2007 prices for Canada. They are provided for illustration only; the weights actually used are combined city weights with adjustments for price changes up until October 2008.
2. Includes the following subgroups: sugar and syrup, confectionery items, margarine, other edible fat and oil items, coffee, tea, condiments, spices and vinegar, soup, infant and junior foods, pre-cooked frozen food preparations, non-alcoholic beverages and all other food preparations.

The Consumer Price Index

This publication presents the highlights and analysis of the movement of the Consumer Price Index (CPI) and its components over the month and year proceeding the reference period. It also provides a range of the most recent tables and graphs on the Canadian CPI.

Detailed CPIs are published simultaneously for Canada, the ten provinces, Whitehorse and Yellowknife. In addition, some information is available for some cities across Canada. The Consumer Price Index for a given month is usually published in the third week of the following month, and it is not revised once it has been published.

The CPI is an indicator of changes in consumer prices experienced by Canadians. It is obtained by comparing through time, the cost of a fixed basket of goods and services purchased by consumers. Since the basket contains items of unchanging or equivalent quantity and quality, the index reflects only pure price movements.

The CPI is an important indicator of how the Canadian economy is performing. This index, used by governments, businesses and private citizens, can affect interest rates, taxes, wages, pensions, and many other monetary transfers.

Highlights

- Consumer prices rose 1.6% in the 12 months to February, following a 1.9% increase in January. On a seasonally adjusted monthly basis, consumer prices rose 0.1% in February.

Briefing notes

Highlights:

- Consumer prices rose 1.6% in the 12 months to February, following a 1.9% increase in January. On an unadjusted monthly basis, consumer prices rose 0.4% in February, after rising 0.3% in January.

All-items Consumer Price Index (CPI):

- The rise in the all-items CPI was due mostly to gasoline prices. Consumers paid 15.3% more at the pump in February than they did a year earlier, compared with a 23.9% increase in January.
- Energy prices rose 4.0% between February 2009 and February 2010, after rising 8.2% in January.
- Prices for purchase of passenger vehicles increased 3.5% on a year-over-year basis in February, following a 3.1% rise in January.
- Prices for traveller accommodation rose 16.0% in February, due primarily to the Winter Olympics.
- All major components in the CPI, except shelter and clothing and footwear, recorded increases in February.
- Upward pressure on the 12-month change came primarily from higher prices for transportation (+5.9%), recreation, education and reading (+3.0%), food (+1.2%), and household operations, furnishings and equipment (+1.8%).

Main contributors to the 12-month change in the CPI:

Main upward contributors:

- Gasoline (+15.3%)
- Passenger vehicle insurance premiums (+7.9%)
- Purchase of passenger vehicles (+3.5%)
- Traveller accommodation (+16.0%)
- Property taxes (+4.3%)

Main downward contributors:

- Mortgage interest cost (-5.8%)
- Natural gas (-22.8%)
- Women's clothing (-8.7%)
- Fresh vegetables (-10.7%)
- Air transportation (-9.5%)

Main contributors to the monthly change in the CPI, not seasonally adjusted:

Main upward contributors:

- Traveller accommodation (+18.6%)
- Travel tours (+17.3%)
- Passenger vehicle insurance premiums (+0.7%)
- Men's clothing (+2.2%)
- Purchase of passenger vehicles (+0.4%)

Main downward contributors:

- Gasoline (-1.7%)
- Air transportation (-5.3%)
- Fresh fruit (-3.2%)
- Mortgage interest cost (-0.4%)
- Fuel oil and other fuels (-3.1%)

Services	2.0	1.8	0.7	0.0

Analysis

Consumer prices rose 1.6% in the 12 months to February, following a 1.9% increase in January.

Chart 1
The 12-month change in the Consumer Price Index (CPI)

Gasoline prices exerted the most upward pressure on the all-items Consumer Price Index (CPI) for the fourth consecutive month. In February, prices at the pump were 15.3% higher than they were in February 2009. This follows a 23.9% rise in the 12 months to January.

Prices at the pump in February 2009 were considerably lower than they were in late 2009 and early 2010. However, gasoline prices have been relatively stable since July 2009.

Chart 2
Evolution of the gasoline price index since February 2007

Overall, energy prices rose 4.0% between February 2009 and February 2010, following an 8.2% increase in the 12 months to January.

Excluding energy, the CPI rose 1.3% in the 12 months to February, matching the increase in January.

Prices for the purchase of passenger vehicles put upward pressure on the CPI for the second consecutive month in February.

As well, prices for traveller accommodation rose 16.0% in February, affected by the Winter Olympics.

12-month change: Six of the eight CPI components on rise

Six of the eight major components of the CPI recorded price increases in the 12 months to February. The exceptions were the shelter component, and clothing and footwear.

Chart 3

Transportation continues to exert the most upward pressure on the Consumer Price Index

Prices in the transportation component continued to exert the strongest upward pressure on the all-items CPI, increasing 5.9%, following a 7.7% rise in January.

In addition to higher gasoline prices, consumers paid 7.9% more for passenger vehicle insurance premiums. As well, prices for the purchase of passenger vehicles rose 3.5% in February, following a 3.1% increase in January. Car manufacturers continued to offer rebates to consumers, but to a lesser extent than they did at the same time period last year.

Prices in the recreation, education and reading component increased 3.0% in the 12 months to February. Consumers paid more for traveller accommodation, cablevision and satellite services and purchase and operation of recreational vehicles. In contrast, prices fell for home entertainment equipment, parts and services and computer equipment and supplies.

Food prices advanced 1.2%, following a 1.4% increase in January.

Upward pressure on the food index came mainly from prices for food purchased from restaurants (+2.6%). Price increases were also observed for dairy products and eggs (+1.4%). On the other hand, prices fell for fresh vegetables, fresh fruit, and meat.

Prices for household operations, furnishings and equipment increased 1.8% in the 12 months to February. Upward pressure in this component came from prices for communications, other household goods and services, and child care and domestic services. Downward pressure came primarily from prices for furniture and household textiles and household appliances.

In the health and personal care component, prices rose 3.0% and were broad-based. Prices for personal care increased 3.2%, while prices for medicinal and pharmaceutical products rose 1.9%.

Shelter costs declined 1.1% in the 12 months to February, mostly the result of declines in mortgage interest cost and natural gas prices.

The mortgage interest cost index, which measures the change in the interest portion of payments on outstanding mortgage debt, fell 5.8% in February, following a 5.5% decrease in January.

Upward pressure on the shelter component came from rent, cost of homeowners' maintenance and repairs, and fuel oil and other fuels.

Prices for clothing and footwear fell 2.6%. The strongest downward pressure in this component came from prices for women's and men's clothing. Prices for children's clothing also recorded a small decline in February.

Provinces: Slower price increases in most provinces

Growth in consumer prices slowed in all provinces except British Columbia between February 2009 and February 2010. In British Columbia, consumer prices rose 1.2%, compared with the 12-month increase of 0.7% in January.

As was the case in January, the largest year-over-year increases occurred in Atlantic Canada: New Brunswick, Prince Edward Island, Newfoundland and Labrador, and Nova Scotia.

Higher price rises in Atlantic Canada were partly attributable to larger upward movements in gasoline prices.

As well, prices for fuel oil and other fuels advanced 11.7% nationally in the 12 months to February, the largest increase since October 2008. These energy products are widely used in home heating in Atlantic Canada, while the rest of the country relies mostly on electricity and natural gas.

Chart 4

Slower price increases in all provinces except British Columbia, year over year

In Ontario, prices rose 1.8%. This was due primarily to higher prices for gasoline, passenger vehicle insurance, and the purchase of passenger vehicles. Downward pressure came mainly from the shelter and clothing and footwear indexes.

In Alberta, consumer prices went up 1.0%. Major contributors to higher prices were the cost of traveller accommodation and gasoline.

Prices in British Columbia rose due mainly to higher prices for traveller accommodation (+64.1%) and gasoline (+12.8%).

With the Winter Olympics, Canadians who travelled to Vancouver in February paid more for their hotel rooms, compared with the same month of last year.

The recreation, education and reading index rose 7.4% in the 12 months to February, which was the largest contributor to the increase in the CPI for British Columbia. On the other hand, cost of shelter was the most significant downward contributor in that province.

Month-over-month seasonally unadjusted CPI increases

Consumer prices prior to seasonal adjustment increased 0.4% in February, after increasing 0.3% in January.

Five of eight major components of the CPI recorded month-over-month increases in February: recreation, education and reading; clothing and footwear; food; household operations, furnishings and equipment; and alcoholic beverages and tobacco products.

Monthly increases in the recreation, education and reading index (+3.0%) were driven by travel services (+17.9%), where prices for traveller accommodation and travel tours increased 18.6% and 17.3%, respectively.

The clothing and footwear index rose 1.2% in February. Major contributors to the increase were men's, children's, and women's clothing.

Food prices went up 0.3% in the wake of month-over-month increases in prices for dairy products and eggs and meat. On the other hand, price declines in fresh fruit and fresh vegetables mitigated the overall increase in the food index.

Increases in the household operations, furnishings and equipment index (+0.4%) were mainly due to upward price movements for furniture and household textiles and child care.

In contrast, transportation (-0.4%) exerted the most downward pressure on the monthly CPI. Gasoline prices (-1.7%) were the most significant downward contributor to the decline.

Shelter costs remained unchanged from January to February.

Seasonally adjusted monthly CPI increases

On a seasonally adjusted monthly basis, the CPI rose 0.1% from January to February, after increasing 0.4% from December to January. February's increase was due mainly to a 1.8% rise in the recreation, education and reading component. Price increases for traveller accommodation largely accounted for the upward movement within this component.

12-month change in the Bank of Canada's core index

The Bank of Canada's core index advanced 2.1% over the 12 months to February, following a 2.0% rise in January.

February's increase was due primarily to price increases for passenger vehicles, as well as for traveller accommodation affected by the Olympics.

On a month-to-month basis, the core index prior to seasonal adjustment increased 0.7% from January to February.

The seasonally adjusted monthly core index went up 0.3% in February, matching the increase in January.

Data quality, concepts and methodology

Definition

The Consumer Price Index (CPI) is an indicator of the changes in consumer prices experienced by the target population. The CPI measures price change by comparing, through time, the cost of a fixed basket of commodities. This basket is based on the expenditures of the target population in a certain reference period, currently 2005. Since the basket contains commodities of unchanging or equivalent quantity and quality, the index reflects only pure price movements.

Separate CPIs are published for Canada, the ten provinces, Whitehorse, Yellowknife and Iqaluit. Some CPI information is also available for an additional sixteen urban centres. Since the CPI is a measure of price change from one time period to another, it cannot be used to indicate differences in price levels between provinces or urban centres.

Population coverage

The population targeted by the CPI consists of families and individuals living in urban and rural private households. For practical reasons, residents of the Territories outside Whitehorse, Yellowknife and Iqaluit are not represented by the index. Prior to February 1995, the target population consisted of private households in Canadian urban centres with a population of 30,000 or more.

Time reference

The CPI compares, in percentage terms, prices in any given time period to prices in the official base period which, at present, is 2002=100. The official time base was changed from 1992=100 to 2002=100 starting with the CPI for May 2007. The change is strictly an arithmetic conversion which alters the index levels but leaves the percentage changes between any two periods intact, except for differences in rounding.

Percent versus index point changes

The movements of the indexes from one month to another are expressed as percent changes rather than changes in index points. Index point changes are affected by the level of the index which, in turn, depends on the time base of the particular index. The percentage change between any two time periods can be readily calculated by dividing the index point difference between the two time periods by the index for the earlier period and multiplying the result by one hundred.

Price coverage

The prices used in the CPI calculation are final prices, inclusive of excise and other indirect taxes paid by consumers. In particular, they include the Goods and Services Tax (GST), as well as provincial retail sales taxes wherever applicable. In regions where the GST and provincial retail sales taxes have been combined, the Harmonized Sales Tax (HST) is included. It follows that the CPI can change as a result of modifications to any of these taxes.

The selection of commodities and the outlets from which prices are collected is judgmental, other than for rents and traveler accommodation. The number of prices required for a given commodity depends on the importance and the nature of the commodity. The samples are designed to represent volume selling commodities and outlets.

The principal objective of the sample design is to ensure an informative, reliable and impartial picture of consumer inflation at the national and provincial levels.

Price collection for a given month's index is carried out during the first three weeks of the month. Although prices for most CPI commodities are collected monthly, prices for commodities having less frequent price changes (e.g. property taxes and electricity rates) are collected at intervals longer than one month. Special pricings are carried out where there is evidence that significant price changes have occurred between scheduled pricing periods.

Weights and linking

The CPI maintains fixed quantitative proportions (weights) between commodities during the life of a given basket. The baskets are updated periodically to take into account changes in consumer expenditure patterns. In May 2007, the basket reflecting the 2005 expenditure patterns replaced the 2001 basket. The continuity of the CPI series is maintained by "linking" the corresponding indexes obtained from consecutive baskets.

The CPI is calculated as a weighted average of specified commodity price indexes. The weights are derived from Survey of Household Spending data. Text table 1 compares the expenditure shares of the two most recent CPI baskets, i.e. the 2005 basket as it was reflected in the CPI in May 2007 and the 2001 basket. Because both sets of weights are expressed in April 2007 or "link month" prices, the differences reflect the shifts in the relative quantities purchased between the two baskets.

When reconstructing or re-aggregating published CPI series, the changes in weights and the linking procedures must be taken into account. For a description of the methodology required to reconstruct or re-aggregate CPI series, see **The Consumer Price Index Reference Paper** catalogue no. 62-553-X (Occasional) or contact Consumer Prices Division.

Text table 1

Comparison of the 2005 and 2001 distribution¹ of expenditures used in the Consumer Price Index, by major component, for Canada

	2005 Expenditures		2001 Expenditures
	Expressed in 2005 prices	Expressed in April 2007 prices	Expressed in April 2007 prices
	percent		
Major Components			
All-Items	100.0	100.0	100.0
Food	16.9	17.0	17.1
Shelter	25.7	26.6	27.7
Household operations, furnishings and equipment	11.4	11.1	10.2
Clothing and footwear	5.6	5.4	5.1
Transportation	19.6	19.9	20.2
Health and personal care	4.8	4.7	4.4
Recreation, education and reading	13.0	12.2	11.2
Alcoholic beverages and tobacco products	3.1	3.1	4.2

1. Figures may not add to 100% due to rounding.

Starting with the October 2006 Consumer Price Index (CPI), Statistics Canada produces and disseminates the Core CPI as defined by the Bank of Canada.

The measure of Core CPI excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on Core CPI, please consult the Bank of Canada Web site. <http://www.bankofcanada.ca/en/inflation/index.htm>.

Statistics Canada also calculates, on behalf of the Bank of Canada, a seasonally adjusted Core CPI. This series is available through CANSIM, Statistics Canada's official database, or by contacting us through the means mentioned on the inside cover of this publication.

Whitehorse, Yellowknife and Iqaluit indexes

The relatively small size of the housing market in these three cities makes it difficult to construct reliable price indexes for new houses. To compensate, the price movements of rental accommodation are used to approximate the price movements of new houses. The rent information itself is collected using different pricing frequencies and collection methods than in the rest of the country. Because of these problems, the indexes for Rented Accommodation and Owned Accommodation are not published for these three cities. Further, the all-items indexes published for these three cities are not strictly comparable with the same indexes for the provinces or the other sixteen cities.

Calculation of urban centre indexes

With the introduction of the 1992 basket, emphasis was shifted from urban centre data to provincial data. Urban Centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of Shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart (or, in the cases of Montréal, Toronto, and Vancouver, a sub-provincial counterpart) is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.

Seasonal adjustment

A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as variations in climate and regular institutional events such as vacations and statutory holidays. Seasonally adjusted series are calculated using Statistics Canada's X-12 ARIMA program. Time series with no detectable seasonal movements remain unchanged from the official series. The official unadjusted series for all-items index, core consumer price index, each of the eight major component indexes and three special aggregates (all-items excluding food, all-items excluding food and energy and all-items excluding 8 of the most volatile components (Bank of Canada definition)) are seasonally adjusted independently.

Each month, the previous month's seasonally adjusted index is subject to revision. On an annual basis, the seasonally adjusted values for the last three years are revised with the January data release. Since these revisions can lead to changes in both the levels and movements of the indexes, users employing the CPI for indexation purposes are advised to use the unadjusted indexes.

Explanatory notes for tables

Table 1 The Consumer Price Index, major components and special aggregates, Canada, not seasonally adjusted

and

Table 2 The Consumer Price Index, major components and special aggregates, Canada, seasonally adjusted

1. 2005 Consumer Price Index (CPI) basket weights at April 2007 prices, Canada.
2. Figures may not add to 100% due to rounding.
3. The measure of core Consumer Price Index (CPI) excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on core CPI, please consult the Bank of Canada Web site: <http://www.bankofcanada.ca/en/inflation/index.htm>.

Table 3 The Consumer Price Index, provinces, Whitehorse, Yellowknife and Iqaluit, not seasonally adjusted

1. Data for Iqaluit are on a December 2002=100 base (200212=100) and the Standard Geographical Classification (SGC) 2001. Previous to April 1, 1999, the town of Iqaluit formed part of the Northwest Territories. Subsequent to April 1, 1999, the town of Iqaluit formed part of the newly-created territory of Nunavut.

Table 4 The Consumer Price Index, major components and selected sub-groups, Canada, not seasonally adjusted

Table 4-1

1. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.

Table 4-2

1. In July 2004, the 2001 basket weights introduced with the January 2003 data were adjusted; the weights for mortgage interest cost were re-evaluated.
2. Due to changes in the Ontario electricity market that became effective May 1, 2002, it was necessary to adjust the treatment of electricity prices in the consumer price index (CPI) for that province. A question and answer fact sheet that explains those changes is now available. To obtain the fact sheet on the treatment of electricity prices in Ontario, please contact Client Services Unit, Prices Division, telephone: (613) 951-9606, toll-free: 1-866-230-2248, fax: (613) 951-2848, e-mail: prices-prix@statcan.gc.ca.

Table 4-5

1. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 4-7

1. From April 2006, Statistics Canada changed its implementation of the price index formula used for traveller accommodation. As a result, data from April 2006 are not strictly comparable to earlier time periods.

Table 5 The Consumer Price Index for Canada, all-items, not seasonally adjusted, historical data

1. The annual average index is calculated as the average of the published 12 individual monthly indexes, rounded to one decimal place. Percentage changes between the annual average indexes are calculated based on these published rounded numbers. Between May 2007 and September 2007, the annual average percentage changes in Table 5 were calculated based on annual average indexes that were not rounded. As a result, some percentage changes were different by +/- 0.1 from the official percentage change. This problem only affected the annual average column of Table 5.

Table 6 Core Consumer Price Index (CPI) (Bank of Canada definition), not seasonally adjusted, historical data

1. The measure of core consumer price index (CPI) excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on core CPI, please consult the Bank of Canada Web site: <http://www.bankofcanada.ca/en/inflation/index.htm>.
2. The annual average index is calculated as the average of the published 12 individual monthly indexes, rounded to one decimal place. Percentage changes between the annual average indexes are calculated based on these published rounded numbers.

Table 7 The Consumer Price Index for Canada, major components and special aggregates, not seasonally adjusted, historical data

1. Goods are physical or tangible commodities usually classified according to their life span into non-durable goods, semi-durable goods and durable goods. Non-durable goods are those goods that can be used up entirely in less than a year, assuming normal usage. For example, fresh food products, disposable cameras and gasoline are non-durable goods. Semi-durable goods are those goods that may last less than 12 months or greater than 12 months depending on the purpose to which they are put. For example, clothing, footwear and household textiles are semi-durable goods. Durable goods are those goods which may be used repeatedly or continuously over more than a year, assuming normal usage. For example, cars, audio and video equipment and furniture are durable goods.
2. A service in the consumer price index (CPI) is characterized by valuable work performed by an individual or organization on behalf of a consumer, for example, car tune-ups, haircuts and city public transportation. Transactions classified as a service may include the cost of goods by their nature. Examples include food in restaurant food services and materials in clothing repair services.
3. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".

4. The annual index level is the average of the 12 individual monthly indexes.

Table 8 Annual average percentage changes for the Consumer Price Index

Table 8-1 and 8-2

1. The annual index level is the average of the 12 individual monthly indexes. The percentage change for a given calendar year is calculated using the annual average indexes.

Table 9 The Consumer Price Index, major components, selected sub-groups and special aggregates, provinces, Whitehorse and Yellowknife, not seasonally adjusted

Tables 9-1, 9-2, 9-3, 9-4, 9-5, 9-7, 9-8, 9-9, 9-10 and 9-11

1. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".
2. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.
3. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 9-6

1. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".
2. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.
3. Due to changes in the Ontario electricity market that became effective May 1, 2002, it was necessary to adjust the treatment of electricity prices in the consumer price index (CPI) for that province. A question and answer fact sheet that explains those changes is now available. To obtain the fact sheet on the treatment of electricity prices in Ontario, please contact Client Services Unit, Prices Division, telephone: (613) 951-9606, toll-free: 1-866-230-2248, fax: (613) 951-2848, e-mail: prices-prix@statcan.gc.ca.
4. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 9-12

1. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".

2. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.
3. Part of the increase first recorded in the shelter index for Yellowknife for December 2004 inadvertently reflected rent increases that actually occurred earlier. As a result, the change in the shelter index was overstated in December 2004, and was understated in the previous two years. The shelter index series for Yellowknife has been corrected from December 2002. In addition, the Yellowknife all-items consumer price index (CPI) and some Yellowknife special aggregate index series have also changed. Data for Canada and all other provinces and territories were not affected.
4. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 10 The all-items Consumer Price Index, provinces, Whitehorse, Yellowknife and Iqaluit, not seasonally adjusted, historical data

1. Data for Iqaluit are on a December 2002=100 base (200212=100) and the Standard Geographical Classification (SGC) 2001. Previous to April 1, 1999, the town of Iqaluit formed part of the Northwest Territories. Subsequent to April 1, 1999, the town of Iqaluit formed part of the newly-created territory of Nunavut.
2. The annual index level is the average of the 12 individual monthly indexes.

Table 11 The Consumer Price Index and selected sub-groups, by urban centre, not seasonally adjusted

1. With the introduction of the 1992 basket in January 1995, emphasis was shifted from urban centre data to provincial data. Urban centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart is used except in the cases of Montréal, Toronto, and Vancouver, where a sub-provincial counterpart is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.
2. Users of the urban centre indexes should note that, effective July 2007, Statistics Canada has corrected the weights of some urban centres that were in error in the Consumer Price Index 2005 basket update. The weights of St. John's, Charlottetown, Halifax, Saint John, Québec City, Montréal, Ottawa, Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary and Victoria were adjusted, while those of Toronto, Vancouver, Whitehorse, Yellowknife and Iqaluit were not. With this correction, the July 2007 level of each urban centre index has been restored to reflect the correct movement for May 2007 and June 2007. The published urban centre indexes for May and June 2007 will remain unchanged. The calculation of urban centre indexes is separate from the calculation of the provincial and national indexes. Therefore, the correction made to the urban centre weights has no effect at all on the provincial or national indexes. Published weight documentation was also not affected.
3. Formerly Ottawa (Ottawa-Gatineau, Ontario part), represents Ottawa only.

Table 12 The all-items Consumer Price Index by urban centre, not seasonally adjusted, historical data

1. With the introduction of the 1992 basket in January 1995, emphasis was shifted from urban centre data to provincial data. Urban centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart is used except in the cases of Montréal, Toronto, and Vancouver, where a sub-provincial counterpart is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.
2. Users of the urban centre indexes should note that, effective July 2007, Statistics Canada has corrected the weights of some urban centres that were in error in the Consumer Price Index 2005 basket update. The weights of St. John's, Charlottetown, Halifax, Saint John, Québec City, Montréal, Ottawa, Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary and Victoria were adjusted, while those of Toronto, Vancouver, Whitehorse, Yellowknife and Iqaluit were not. With this correction, the July 2007 level of each urban centre index has been restored to reflect the correct movement for May 2007 and June 2007. The published urban centre indexes for May and June 2007 will remain unchanged. The calculation of urban centre indexes is separate from the calculation of the provincial and national indexes. Therefore, the correction made to the urban centre weights has no effect at all on the provincial or national indexes. Published weight documentation was also not affected.
3. The annual index level is the average of the 12 individual monthly indexes.
4. Formerly Ottawa (Ottawa-Gatineau, Ontario part), represents Ottawa only.

Table 14 Average retail prices, monthly, Canada

1. Prices are expressed in dollars, except for the price of gasoline which is expressed in cents per litre.

Average retail prices for food, household supplies, personal care items, cigarettes and gasoline

Table 14 shows, for the current month and the two previous months, average prices for selected food, household supplies, personal care items, cigarettes and for gasoline.

Prices for these items are collected as part of the regular monthly CPI survey. Prices for the selected food, household supply and personal care items are observed in food supermarkets, while prices for cigarettes are collected in supermarkets, department stores, drug stores and tobacco shops. Average prices for each commodity are calculated as a weighted average of the average prices in the observed urban centres using the population of these urban centres as weights.

The commodities which are priced can vary in quality between outlets or between urban centres. This is the reason why average prices are not published for each of those urban centres. Brands and outlets can also vary from month to month. Therefore, average prices may not necessarily be fully comparable from one month to another and should not be used as an appropriate measure of pure price change through time. A matched commodity and outlet sample is used for the CPI to determine the pure price movement of commodities through time.

Table 15 Inter-city indexes of retail price differentials, as of October 2008, for selected groups of consumer goods and services, not seasonally adjusted

Purpose and Scope

Table 15 shows estimates of retail price differences between 11 Canadian cities in all 10 provinces, as of October 2008. These estimates are based on a selection of commodities (goods and services) purchased by consumers in each of the 11 cities.

These estimates should not be interpreted as a measure of differences in the cost-of-living between cities. The indexes provide price comparisons for a selection of commodities only, and are not meant to give an exhaustive comparison of all goods and services purchased by consumers. Additionally, the shelter price concept used for these indexes is not conducive to making cost-of-living type comparisons between cities (see below).

Methodology

In order to produce optimal Inter-city indexes, commodity comparisons were initially made by pairing cities that are in close geographic proximity. The resulting price level comparisons were then extended to include comparisons between all of the cities, using a chaining procedure. The following initial pairings were used:

St. John's	Halifax
Charlottetown-Summerside	Halifax
Saint John	Halifax
Ottawa	Halifax
Toronto	Montréal
Ottawa	Toronto
Toronto	Winnipeg
Regina	Winnipeg
Edmonton	Winnipeg
Edmonton	Vancouver

Reliable Inter-city price comparisons require that the selected commodities be very similar across cities. This ensures that the variation in index levels between cities is due to pure price differences and not to differences in the attributes of the commodities, such as size and/or quality.

Within each city pair, commodity price quotes were matched on the basis of detailed descriptions. Whenever possible, commodities were matched by brand, quantity and with some regard for the comparability of retail outlets from which they were selected.

Additionally, the target prices for this study are final retail prices and as such, include all sales taxes and levies applied to consumer commodities within a city. This can be an important source of variation when explaining differences in inter-city price levels.

It should be noted that price data for the Inter-city indexes is drawn from the sample of monthly price data collected for the Consumer Price Index (CPI). Given that the CPI sample is optimized to produce accurate price comparisons through time, and not across regions, the number of matched price quotes between cities can be small. It should also be noted that, especially in periods when prices are highly volatile, the timing of the commodity price comparison can significantly affect city-to-city retail price relationships.

The weights used for aggregating the city indexes into the all-items Inter-city index are based on the expenditures of consumers living in each of the 11 cities. The weights are currently based on 2005 consumer expenditure data.

The all-items Inter-city index for a particular city is compared to the average of all 11 cities, which is equal to 100. For example, an index value of 102 for a particular city means that prices for the measured commodities are 2% higher than the weighted, combined city average.

Additional Information on Shelter

Shelter prices were absent from the Inter-city index program prior to 1999 because of methodological and conceptual issues associated with their measurement. The diverse nature of shelter means that accurate matches between cities are often difficult to make.

To account for some of these difficulties, a rental equivalence approach is used to construct the Inter-city price indexes for owned accommodation. Such an approach uses market rents as an approximation to the cost of the shelter services consumed by homeowners in each city. It is important to note that this approach may not be suitable for the needs of all users. For instance, since the rental equivalence approach does not represent an out-of-pocket expenditure, the indexes should not be used for measuring differences in the purchasing power of homeowners across cities.

Footnotes for Table 15

1. The weights shown are rounded 2005 basket weights at April 2007 prices for Canada. They are provided for illustration only; the weights actually used are combined city weights with adjustments for price changes up until October 2008.
2. Includes the following subgroups: sugar and syrup, confectionery items, margarine, other edible fat and oil items, coffee, tea, condiments, spices and vinegar, soup, infant and junior foods, pre-cooked frozen food preparations, non-alcoholic beverages and all other food preparations.

The Consumer Price Index

This publication presents the highlights and analysis of the movement of the Consumer Price Index (CPI) and its components over the month and year proceeding the reference period. It also provides a range of the most recent tables and graphs on the Canadian CPI.

Detailed CPIs are published simultaneously for Canada, the ten provinces, Whitehorse and Yellowknife. In addition, some information is available for some cities across Canada. The Consumer Price Index for a given month is usually published in the third week of the following month, and it is not revised once it has been published.

The CPI is an indicator of changes in consumer prices experienced by Canadians. It is obtained by comparing through time, the cost of a fixed basket of goods and services purchased by consumers. Since the basket contains items of unchanging or equivalent quantity and quality, the index reflects only pure price movements.

The CPI is an important indicator of how the Canadian economy is performing. This index, used by governments, businesses and private citizens, can affect interest rates, taxes, wages, pensions, and many other monetary transfers.

Highlights

- Consumer prices rose 1.4% in the 12 months to March, following a 1.6% increase in February. On a seasonally adjusted monthly basis, consumer prices fell 0.1% from February to March.

Briefing notes

Highlights:

- Consumer prices rose 1.4% in the 12 months to March, following a 1.6% increase in February. On an unadjusted monthly basis, consumer prices remained unchanged in March, after rising 0.4% in February.

All-items Consumer Price Index (CPI):

- The rise in the all-items CPI was due mostly to gasoline prices. Consumers paid 17.2% more at the pump in March than they did a year earlier, compared with a 15.3% increase in February.
- Energy prices rose 5.8% between March 2009 and March 2010, after rising 4.0% in February.
- Prices for purchase of passenger vehicles increased 3.9% on a year-over-year basis in March, following a 3.5% rise in February.
- All major components in the CPI, except shelter and clothing and footwear, recorded increases in March.
- Upward pressure on the 12-month change came primarily from higher prices for transportation (+6.0%), food (+1.3%), and household operations, furnishings and equipment (+1.4).

Main contributors to the 12-month change in the CPI:

Main upward contributors:

- Gasoline (+17.2%)
- Purchase of passenger vehicles (+3.9%)
- Passenger vehicle insurance premiums (+5.5%)
- Property taxes (+4.3%)
- Food purchased from restaurants (+2.6%)

Main downward contributors:

- Mortgage interest cost (-6.0%)
- Natural gas (-22.4%)
- Air transportation (-10.9%)
- Women's clothing (-6.3%)
- Video equipment (-16.6%)

Main contributors to the monthly change in the CPI, not seasonally adjusted:**Main upward contributors:**

- Gasoline (+3.7%)
- Women's clothing (+6.4%)
- Fresh vegetables (+3.3%)
- Men's clothing (+2.5%)
- Homeowner's replacement cost (+0.5%)

Main downward contributors:

- Traveller accommodation (-13.8%)
- Purchase of passenger vehicles (-1.6%)
- Mortgage interest cost (-0.4%)
- Natural gas (-1.7%)
- Electricity (-0.6%)

Analysis

Consumer prices rose 1.4% in the 12 months to March, following a 1.6% increase in February.

Chart 1

The 12-month change in the Consumer Price Index (CPI)

12-month % change

Gasoline prices exerted the most upward pressure on the all-items Consumer Price Index (CPI) for the fifth consecutive month. In March, prices at the pump were 17.2% higher than they were in March 2009. This follows a 15.3% rise in the 12 months to February.

Chart 2
Evolution of the gasoline price index since March 2007

Overall, energy prices rose 5.8% between March 2009 and March 2010, following a 4.0% increase in the 12 months to February.

Excluding energy, the CPI rose 1.0% in the 12 months to March, compared with a 1.3% increase in February.

Prices for the purchase of passenger vehicles put upward pressure on the CPI for the third consecutive month in March. Prices for the purchase of passenger vehicles rose 3.9%, after a 3.5% increase in February.

12-month change: Six of the eight CPI components rise

Overall, six of the eight major components of the CPI recorded price increases in the 12 months to March. The exceptions were shelter, and clothing and footwear.

Chart 3

Transportation continues to exert the most upward pressure on the Consumer Price Index

Transportation prices, which rose 6.0%, exerted the strongest upward pressure on the all-items CPI for the fifth consecutive month. In addition to higher gasoline and passenger vehicle prices, consumers paid 5.5% more for passenger vehicle insurance premiums in March than a year ago. The cost of inter-city transportation fell 9.6%.

Food prices advanced 1.3%, following a 1.2% increase in February. Upward pressure on the food index came mainly from prices for food purchased from restaurants (+2.6%). Price increases were also observed for sugar and confectionery and non-alcoholic beverages. Prices fell for fresh vegetables, meat, and fresh fruit.

Prices for household operations, furnishings and equipment increased 1.4% in the 12 months to March. Upward pressure in this component came mostly from prices for communications, other household goods and services, and child care and domestic services.

In the health and personal care component, prices rose 2.7% and increases were broad-based. Prices for health care services increased 4.5%, while prices for personal care supplies and equipment rose 3.1%.

Prices in the recreation, education and reading component increased 0.7% in the 12 months to March. Consumers paid more for tuition fees and cablevision and satellite services.

Shelter costs fell 0.7%, mainly the result of declines in mortgage interest cost and natural gas prices.

The mortgage interest cost index, which measures the change in the interest portion of payments on outstanding mortgage debt, fell 6.0% in March, following a 5.8% decrease in February.

Prices for clothing and footwear declined 2.2%. The strongest downward pressure in this component came from lower prices for women's clothing and women's footwear. Prices for children's and men's clothing also recorded declines.

12-month change: Consumer prices increase in all provinces

Consumer prices increased in all provinces in the 12 months to March. The most significant upward pressure on prices in all provinces came from gasoline prices.

As was the case in January and February, the largest year-over-year increases occurred in the four Atlantic provinces. Higher prices in Atlantic Canada were partly attributable to larger upward movements in gasoline. Gasoline price increases in Atlantic Canada ranged from 20.3% in Newfoundland and Labrador to 23.8% in Nova Scotia. As well, prices for fuel oil and other fuels advanced 20.7% nationally in the 12 months to March, the largest increase since October 2008.

Chart 4
Atlantic provinces post the highest price increases

In Ontario, prices rose 1.4%. This was due primarily to higher prices for gasoline, passenger vehicle insurance premiums, and the purchase of passenger vehicles. Downward pressure came mainly from lower prices for natural gas.

Prices in British Columbia rose 0.5% in March compared with the same month last year, after a 1.2% increase in February. The increase was due mainly to the upward pressure from gasoline prices and property taxes. Prices for traveller accommodation returned closer to the January level, prior to the Winter Olympics. Prices for traveller accommodation increased 2.8% in the 12-months to March, following a 64.1% increase in February.

Month-over-month seasonally unadjusted CPI holds steady

Consumer prices prior to seasonal adjustment remained unchanged in March, after increasing 0.4% in February.

Four of eight major components of the CPI recorded month-over-month increases in March: clothing and footwear; transportation; food; and alcoholic beverages and tobacco products.

Monthly increases in the clothing and footwear index (+2.6%) were primarily driven by higher prices for women's and men's clothing.

Increases in the transportation index (+0.3%) were due mainly to upward price movements for gasoline and public transportation.

Food prices went up 0.3% due to month-over-month increases in prices for fresh vegetables, non-alcoholic beverages, and fresh fruit.

In contrast, the recreation, education and reading index (-1.5%) exerted the most downward pressure on the monthly CPI in March. Prices for traveller accommodation (-13.8%) exerted the most significant downward pressure on the index, where prices for hotel rooms returned closer to the January level.

The cost of household operations, furnishings and equipment remained unchanged from February to March.

Seasonally adjusted monthly CPI falls

On a seasonally adjusted monthly basis, the CPI fell 0.1% in March, after remaining unchanged from January to February. March's decline was due primarily to a 2.0% decrease in the recreation, education and reading component. Lower prices for traveller accommodation largely accounted for the downward movement within this component.

The seasonally adjusted monthly CPI's decline in March was the first decrease since July 2009.

12-month change in the Bank of Canada's core index

The Bank of Canada's core index advanced 1.7% over the 12 months to March, following a 2.1% rise in February. March's increase was due primarily to a rise in prices for the purchase of passenger vehicles, passenger vehicle insurance premiums, property taxes, and food purchased from restaurants.

On a month-to-month basis, the core index prior to seasonal adjustment fell 0.2% in March, after posting a 0.7% increase in February.

The seasonally adjusted monthly core index fell 0.3% in March, following a 0.4% increase in February.

Data quality, concepts and methodology

Definition

The Consumer Price Index (CPI) is an indicator of the changes in consumer prices experienced by the target population. The CPI measures price change by comparing, through time, the cost of a fixed basket of commodities. This basket is based on the expenditures of the target population in a certain reference period, currently 2005. Since the basket contains commodities of unchanging or equivalent quantity and quality, the index reflects only pure price movements.

Separate CPIs are published for Canada, the ten provinces, Whitehorse, Yellowknife and Iqaluit. Some CPI information is also available for an additional sixteen urban centres. Since the CPI is a measure of price change from one time period to another, it cannot be used to indicate differences in price levels between provinces or urban centres.

Population coverage

The population targeted by the CPI consists of families and individuals living in urban and rural private households. For practical reasons, residents of the Territories outside Whitehorse, Yellowknife and Iqaluit are not represented by the index. Prior to February 1995, the target population consisted of private households in Canadian urban centres with a population of 30,000 or more.

Time reference

The CPI compares, in percentage terms, prices in any given time period to prices in the official base period which, at present, is 2002=100. The official time base was changed from 1992=100 to 2002=100 starting with the CPI for May 2007. The change is strictly an arithmetic conversion which alters the index levels but leaves the percentage changes between any two periods intact, except for differences in rounding.

Percent versus index point changes

The movements of the indexes from one month to another are expressed as percent changes rather than changes in index points. Index point changes are affected by the level of the index which, in turn, depends on the time base of the particular index. The percentage change between any two time periods can be readily calculated by dividing the index point difference between the two time periods by the index for the earlier period and multiplying the result by one hundred.

Price coverage

The prices used in the CPI calculation are final prices, inclusive of excise and other indirect taxes paid by consumers. In particular, they include the Goods and Services Tax (GST), as well as provincial retail sales taxes wherever applicable. In regions where the GST and provincial retail sales taxes have been combined, the Harmonized Sales Tax (HST) is included. It follows that the CPI can change as a result of modifications to any of these taxes.

The selection of commodities and the outlets from which prices are collected is judgmental, other than for rents and traveler accommodation. The number of prices required for a given commodity depends on the importance and the nature of the commodity. The samples are designed to represent volume selling commodities and outlets.

The principal objective of the sample design is to ensure an informative, reliable and impartial picture of consumer inflation at the national and provincial levels.

Price collection for a given month's index is carried out during the first three weeks of the month. Although prices for most CPI commodities are collected monthly, prices for commodities having less frequent price changes (e.g. property taxes and electricity rates) are collected at intervals longer than one month. Special pricings are carried out where there is evidence that significant price changes have occurred between scheduled pricing periods.

Weights and linking

The CPI maintains fixed quantitative proportions (weights) between commodities during the life of a given basket. The baskets are updated periodically to take into account changes in consumer expenditure patterns. In May 2007, the basket reflecting the 2005 expenditure patterns replaced the 2001 basket. The continuity of the CPI series is maintained by "linking" the corresponding indexes obtained from consecutive baskets.

The CPI is calculated as a weighted average of specified commodity price indexes. The weights are derived from Survey of Household Spending data. Text table 1 compares the expenditure shares of the two most recent CPI baskets, i.e. the 2005 basket as it was reflected in the CPI in May 2007 and the 2001 basket. Because both sets of weights are expressed in April 2007 or "link month" prices, the differences reflect the shifts in the relative quantities purchased between the two baskets.

When reconstructing or re-aggregating published CPI series, the changes in weights and the linking procedures must be taken into account. For a description of the methodology required to reconstruct or re-aggregate CPI series, see **The Consumer Price Index Reference Paper** catalogue no. 62-553-X (Occasional) or contact Consumer Prices Division.

Text table 1

Comparison of the 2005 and 2001 distribution¹ of expenditures used in the Consumer Price Index, by major component, for Canada

	2005 Expenditures		2001 Expenditures
	Expressed in 2005 prices	Expressed in April 2007 prices	Expressed in April 2007 prices
	percent		
Major Components			
All-items	100.0	100.0	100.0
Food	16.9	17.0	17.1
Shelter	25.7	26.6	27.7
Household operations, furnishings and equipment	11.4	11.1	10.2
Clothing and footwear	5.6	5.4	5.1
Transportation	19.6	19.9	20.2
Health and personal care	4.8	4.7	4.4
Recreation, education and reading	13.0	12.2	11.2
Alcoholic beverages and tobacco products	3.1	3.1	4.2

1. Figures may not add to 100% due to rounding.

Starting with the October 2006 Consumer Price Index (CPI), Statistics Canada produces and disseminates the Core CPI as defined by the Bank of Canada.

The measure of Core CPI excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on Core CPI, please consult the Bank of Canada Web site. <http://www.bankofcanada.ca/en/inflation/index.htm>.

Statistics Canada also calculates, on behalf of the Bank of Canada, a seasonally adjusted Core CPI. This series is available through CANSIM, Statistics Canada's official database, or by contacting us through the means mentioned on the inside cover of this publication.

Whitehorse, Yellowknife and Iqaluit indexes

The relatively small size of the housing market in these three cities makes it difficult to construct reliable price indexes for new houses. To compensate, the price movements of rental accommodation are used to approximate the price movements of new houses. The rent information itself is collected using different pricing frequencies and collection methods than in the rest of the country. Because of these problems, the indexes for Rented Accommodation and Owned Accommodation are not published for these three cities. Further, the all-items indexes published for these three cities are not strictly comparable with the same indexes for the provinces or the other sixteen cities.

Calculation of urban centre indexes

With the introduction of the 1992 basket, emphasis was shifted from urban centre data to provincial data. Urban Centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of Shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart (or, in the cases of Montréal, Toronto, and Vancouver, a sub-provincial counterpart) is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.

Seasonal adjustment

A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as variations in climate and regular institutional events such as vacations and statutory holidays. Seasonally adjusted series are calculated using Statistics Canada's X-12 ARIMA program. Time series with no detectable seasonal movements remain unchanged from the official series. The official unadjusted series for all-items index, core consumer price index, each of the eight major component indexes and three special aggregates (all-items excluding food, all-items excluding food and energy and all-items excluding 8 of the most volatile components (Bank of Canada definition)) are seasonally adjusted independently.

Each month, the previous month's seasonally adjusted index is subject to revision. On an annual basis, the seasonally adjusted values for the last three years are revised with the January data release. Since these revisions can lead to changes in both the levels and movements of the indexes, users employing the CPI for indexation purposes are advised to use the unadjusted indexes.

Table 3 The Consumer Price Index, provinces, Whitehorse, Yellowknife and Iqaluit, not seasonally adjusted

1. Data for Iqaluit are on a December 2002=100 base (200212=100) and the Standard Geographical Classification (SGC) 2001. Previous to April 1, 1999, the town of Iqaluit formed part of the Northwest Territories. Subsequent to April 1, 1999, the town of Iqaluit formed part of the newly-created territory of Nunavut.

Table 4 The Consumer Price Index, major components and selected sub-groups, Canada, not seasonally adjusted

Table 4-1

1. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.

Table 4-2

1. In July 2004, the 2001 basket weights introduced with the January 2003 data were adjusted; the weights for mortgage interest cost were re-evaluated.
2. Due to changes in the Ontario electricity market that became effective May 1, 2002, it was necessary to adjust the treatment of electricity prices in the Consumer Price Index (CPI) for that province. A question and answer fact sheet that explains those changes is now available. To obtain the fact sheet on the treatment of electricity prices in Ontario, please contact CPD Dissemination Unit, Consumer Prices Division, telephone: (613) 951-9606, toll-free: 1-866-230-2248, fax: (613) 951-2848, e-mail: cpd-info-dpc@statcan.gc.ca.

Table 4-5

1. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 4-7

1. From April 2006, Statistics Canada changed its implementation of the price index formula used for traveller accommodation. As a result, data from April 2006 are not strictly comparable to earlier time periods.

Table 5 The Consumer Price Index for Canada, all-items, not seasonally adjusted, historical data

1. The annual average index is calculated as the average of the published 12 individual monthly indexes, rounded to one decimal place. Percentage changes between the annual average indexes are calculated based on these published rounded numbers. Between May 2007 and September 2007, the annual average percentage changes in Table 5 were calculated based on annual average indexes that were not rounded. As a result, some percentage changes were different by +/- 0.1 from the official percentage change. This problem only affected the annual average column of Table 5.

Table 6 Core Consumer Price Index (CPI) (Bank of Canada definition), not seasonally adjusted, historical data

1. The measure of core Consumer Price Index (CPI) excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on core CPI, please consult the Bank of Canada Web site: <http://www.bankofcanada.ca/en/inflation/index.htm>.
2. The annual average index is calculated as the average of the published 12 individual monthly indexes, rounded to one decimal place. Percentage changes between the annual average indexes are calculated based on these published rounded numbers.

Table 7 The Consumer Price Index for Canada, major components and special aggregates, not seasonally adjusted, historical data

1. Goods are physical or tangible commodities usually classified according to their life span into non-durable goods, semi-durable goods and durable goods. Non-durable goods are those goods that can be used up entirely in less than a year, assuming normal usage. For example, fresh food products, disposable cameras and gasoline are non-durable goods. Semi-durable goods are those goods that may last less than 12 months or greater than 12 months depending on the purpose to which they are put. For example, clothing, footwear and household textiles are semi-durable goods. Durable goods are those goods which may be used repeatedly or continuously over more than a year, assuming normal usage. For example, cars, audio and video equipment and furniture are durable goods.
2. A service in the Consumer Price Index (CPI) is characterized by valuable work performed by an individual or organization on behalf of a consumer, for example, car tune-ups, haircuts and city public transportation. Transactions classified as a service may include the cost of goods by their nature. Examples include food in restaurant food services and materials in clothing repair services.
3. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".

4. The annual index level is the average of the 12 individual monthly indexes.

Table 8 Annual average percentage changes for the Consumer Price Index

Table 8-1 and 8-2

1. The annual index level is the average of the 12 individual monthly indexes. The percentage change for a given calendar year is calculated using the annual average indexes.

Tables 9-1, 9-2, 9-3, 9-4, 9-5, 9-7, 9-8, 9-9, 9-10 and 9-11

1. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".
2. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.
3. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 9-6

1. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".
2. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.
3. Due to changes in the Ontario electricity market that became effective May 1, 2002, it was necessary to adjust the treatment of electricity prices in the Consumer Price Index (CPI) for that province. A question and answer fact sheet that explains those changes is now available. To obtain the fact sheet on the treatment of electricity prices in Ontario, please contact CPD Dissemination Unit, Consumer Prices Division, telephone: (613) 951-9606, toll-free: 1-866-230-2248, fax: (613) 951-2848, e-mail: cpd-info-dpc@statcan.gc.ca.
4. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 9-12

1. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".

2. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.
3. Part of the increase first recorded in the shelter index for Yellowknife for December 2004 inadvertently reflected rent increases that actually occurred earlier. As a result, the change in the shelter index was overstated in December 2004, and was understated in the previous two years. The shelter index series for Yellowknife has been corrected from December 2002. In addition, the Yellowknife all-items Consumer Price Index (CPI) and some Yellowknife special aggregate index series have also changed. Data for Canada and all other provinces and territories were not affected.
4. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 10 The all-items Consumer Price Index, provinces, Whitehorse, Yellowknife and Iqaluit, not seasonally adjusted, historical data

1. Data for Iqaluit are on a December 2002=100 base (200212=100) and the Standard Geographical Classification (SGC) 2001. Previous to April 1, 1999, the town of Iqaluit formed part of the Northwest Territories. Subsequent to April 1, 1999, the town of Iqaluit formed part of the newly-created territory of Nunavut.
2. The annual index level is the average of the 12 individual monthly indexes.

Table 11 The Consumer Price Index and selected sub-groups, by urban centre, not seasonally adjusted

1. With the introduction of the 1992 basket in January 1995, emphasis was shifted from urban centre data to provincial data. Urban centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart is used except in the cases of Montréal, Toronto, and Vancouver, where a sub-provincial counterpart is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.
2. Users of the urban centre indexes should note that, effective July 2007, Statistics Canada has corrected the weights of some urban centres that were in error in the Consumer Price Index 2005 basket update. The weights of St. John's, Charlottetown, Halifax, Saint John, Québec City, Montréal, Ottawa, Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary and Victoria were adjusted, while those of Toronto, Vancouver, Whitehorse, Yellowknife and Iqaluit were not. With this correction, the July 2007 level of each urban centre index has been restored to reflect the correct movement for May 2007 and June 2007. The published urban centre indexes for May and June 2007 will remain unchanged. The calculation of urban centre indexes is separate from the calculation of the provincial and national indexes. Therefore, the correction made to the urban centre weights has no effect at all on the provincial or national indexes. Published weight documentation was also not affected.
3. Formerly Ottawa (Ottawa-Gatineau, Ontario part), represents Ottawa only.

Table 12 The all-items Consumer Price Index by urban centre, not seasonally adjusted, historical data

1. With the introduction of the 1992 basket in January 1995, emphasis was shifted from urban centre data to provincial data. Urban centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart is used except in the cases of Montréal, Toronto, and Vancouver, where a sub-provincial counterpart is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.
2. Users of the urban centre indexes should note that, effective July 2007, Statistics Canada has corrected the weights of some urban centres that were in error in the Consumer Price Index 2005 basket update. The weights of St. John's, Charlottetown, Halifax, Saint John, Québec City, Montréal, Ottawa, Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary and Victoria were adjusted, while those of Toronto, Vancouver, Whitehorse, Yellowknife and Iqaluit were not. With this correction, the July 2007 level of each urban centre index has been restored to reflect the correct movement for May 2007 and June 2007. The published urban centre indexes for May and June 2007 will remain unchanged. The calculation of urban centre indexes is separate from the calculation of the provincial and national indexes. Therefore, the correction made to the urban centre weights has no effect at all on the provincial or national indexes. Published weight documentation was also not affected.
3. The annual index level is the average of the 12 individual monthly indexes.

Table 14 Average retail prices, monthly, Canada

1. Prices are expressed in dollars, except for the price of gasoline which is expressed in cents per litre.

Average retail prices for food, household supplies, personal care items, cigarettes and gasoline

Table 14 shows, for the current month and the two previous months, average prices for selected food, household supplies, personal care items, cigarettes and for gasoline.

Prices for these items are collected as part of the regular monthly CPI survey. Prices for the selected food, household supply and personal care items are observed in food supermarkets, while prices for cigarettes are collected in supermarkets, department stores, drug stores and tobacco shops. Average prices for each commodity are calculated as a weighted average of the average prices in the observed urban centres using the population of these urban centres as weights.

The commodities which are priced can vary in quality between outlets or between urban centres. This is the reason why average prices are not published for each of those urban centres. Brands and outlets can also vary from month to month. Therefore, average prices may not necessarily be fully comparable from one month to another and should not be used as an appropriate measure of pure price change through time. A matched commodity and outlet sample is used for the CPI to determine the pure price movement of commodities through time.

Table 15 Inter-city indexes of retail price differentials, as of October 2008, for selected groups of consumer goods and services, not seasonally adjusted

Purpose and Scope

Table 15 shows estimates of retail price differences between 11 Canadian cities in all 10 provinces, as of October 2008. These estimates are based on a selection of commodities (goods and services) purchased by consumers in each of the 11 cities.

These estimates should not be interpreted as a measure of differences in the cost-of-living between cities. The indexes provide price comparisons for a selection of commodities only, and are not meant to give an exhaustive comparison of all goods and services purchased by consumers. Additionally, the shelter price concept used for these indexes is not conducive to making cost-of-living type comparisons between cities (see below).

Methodology

In order to produce optimal Inter-city indexes, commodity comparisons were initially made by pairing cities that are in close geographic proximity. The resulting price level comparisons were then extended to include comparisons between all of the cities, using a chaining procedure. The following initial pairings were used:

St. John's	Halifax
Charlottetown-Summerside	Halifax
Saint John	Halifax
Ottawa	Halifax
Toronto	Montréal
Ottawa	Toronto
Toronto	Winnipeg
Regina	Winnipeg
Edmonton	Winnipeg
Edmonton	Vancouver

Reliable Inter-city price comparisons require that the selected commodities be very similar across cities. This ensures that the variation in index levels between cities is due to pure price differences and not to differences in the attributes of the commodities, such as size and/or quality.

Within each city pair, commodity price quotes were matched on the basis of detailed descriptions. Whenever possible, commodities were matched by brand, quantity and with some regard for the comparability of retail outlets from which they were selected.

Additionally, the target prices for this study are final retail prices and as such, include all sales taxes and levies applied to consumer commodities within a city. This can be an important source of variation when explaining differences in inter-city price levels.

It should be noted that price data for the Inter-city indexes is drawn from the sample of monthly price data collected for the Consumer Price Index (CPI). Given that the CPI sample is optimized to produce accurate price comparisons through time, and not across regions, the number of matched price quotes between cities can be small. It should also be noted that, especially in periods when prices are highly volatile, the timing of the commodity price comparison can significantly affect city-to-city retail price relationships.

The weights used for aggregating the city indexes into the all-items Inter-city index are based on the expenditures of consumers living in each of the 11 cities. The weights are currently based on 2005 consumer expenditure data.

The all-items Inter-city index for a particular city is compared to the average of all 11 cities, which is equal to 100. For example, an index value of 102 for a particular city means that prices for the measured commodities are 2% higher than the weighted, combined city average.

Additional Information on Shelter

Shelter prices were absent from the Inter-city index program prior to 1999 because of methodological and conceptual issues associated with their measurement. The diverse nature of shelter means that accurate matches between cities are often difficult to make.

To account for some of these difficulties, a rental equivalence approach is used to construct the Inter-city price indexes for owned accommodation. Such an approach uses market rents as an approximation to the cost of the shelter services consumed by homeowners in each city. It is important to note that this approach may not be suitable for the needs of all users. For instance, since the rental equivalence approach does not represent an out-of-pocket expenditure, the indexes should not be used for measuring differences in the purchasing power of homeowners across cities.

Footnotes for Table 15

1. The weights shown are rounded 2005 basket weights at April 2007 prices for Canada. They are provided for illustration only; the weights actually used are combined city weights with adjustments for price changes up until October 2008.
2. Includes the following subgroups: sugar and syrup, confectionery items, margarine, other edible fat and oil items, coffee, tea, condiments, spices and vinegar, soup, infant and junior foods, pre-cooked frozen food preparations, non-alcoholic beverages and all other food preparations.

Gouvernement
du Canada

Canada

This publication presents the highlights and analysis of the movement of the Consumer Price Index (CPI) and its components over the month and year proceeding the reference period. It also provides a range of the most recent tables and graphs on the Canadian CPI.

The CPI is an indicator of changes in consumer prices experienced by Canadians. It is obtained by comparing through time, the cost of a fixed basket of goods and services purchased by consumers. Since the basket contains items of unchanging or equivalent quantity and quality, the index reflects only pure price movements.

The CPI is an important indicator of how the Canadian economy is performing. This index, used by governments, businesses and private citizens, can affect interest rates, taxes, wages, pensions, and many other monetary transfers.

Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

User information

Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0^s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- P preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- E use with caution
- F too unreliable to be published

Note on CANSIM

Data that appears in the **The Consumer Price Index** (catalogue no. 62-001-X) are also available electronically in our CANSIM (Canadian Socio-Economic Information Management System) database through the Internet tables 326-0009, 326-0012, 326-0015, 326-0020, 326-0021 and 326-0022, at a cost of \$3.00 per series. In general, *CANSIM* provides a longer historical series. For further information on *CANSIM* call 1-800-263-1136.

Highlights

- Consumer prices rose 1.8% in the 12 months to April, following a 1.4% increase in March. Excluding energy, prices advanced 1.1%, compared with a 1.0% increase in March. On a seasonally adjusted monthly basis, consumer prices rose 0.1% from March to April.

Briefing notes

Highlights:

- Consumer prices rose 1.8% in the 12 months to April, following a 1.4% increase in March. Excluding energy, prices advanced 1.1%, compared with a 1.0% increase in March. On an unadjusted monthly basis, consumer prices rose 0.3% in April, after remaining unchanged in March.

All-items Consumer Price Index (CPI):

- The rise in the all-items CPI was due mostly to gasoline prices. Consumers paid 16.3% more at the pump in April than they did a year earlier, compared with a 17.2% increase in March.
- Natural gas prices were no longer exerting significant downward pressure on the CPI. Prices for natural gas were 3.3% higher in April than they were a year earlier. This followed a 22.4% decline in the 12 months to March. April's increase was the first 12-month increase in natural gas prices in over a year.
- Energy prices rose 9.8% between April 2009 and April 2010, after rising 5.8% in March.
- Prices for purchase of passenger vehicles increased 5.3% on a year-over-year basis in April, following a 3.9% rise in March.
- All major components in the CPI, except clothing and footwear, recorded increases in April.
- Upward pressure on the 12-month change came primarily from higher prices for transportation (+6.2%), shelter (+0.8%), and food (+1.0%).

Main contributors to the 12-month change in the CPI:

Main upward contributors:

- Gasoline (+16.3%)
- Purchase of passenger vehicles (+5.3%)
- Passenger vehicle insurance premiums (+5.6%)
- Property taxes (+4.3%)
- Food purchased from restaurants (+2.3%)

Main downward contributors:

- Mortgage interest cost (-6.1%)
- Air transportation (-8.7%)
- Furniture (-4.9%)
- Video equipment (-15.2%)
- Travel tours (-5.7%)

Main contributors to the monthly change in the CPI, not seasonally adjusted:

Main upward contributors:

- Natural gas (+6.4%)
- Fresh vegetables (+4.9%)
- Health care (+1.6%)
- Homeowner's replacement cost (+0.9%)
- Air transportation (+3.1%)

Main downward contributors:

- Fresh fruit (-3.9%)
- Non-alcoholic beverages (-2.3%)
- Mortgage interest cost (-0.4%)
- Bakery products (-0.9%)
- Household textiles (-1.9%)

Analysis

Consumer prices rose 1.8% in the 12 months to April, following a 1.4% increase in March.

Chart 1
The 12-month change in the Consumer Price Index and the CPI excluding energy

Overall, energy prices rose 9.8% between April 2009 and April 2010, following a 5.8% increase during the 12-month period to March. Excluding energy, the Consumer Price Index (CPI) rose 1.1%, compared with a 1.0% increase in March.

Gasoline prices exerted the strongest upward pressure on the all-items CPI for the sixth consecutive month. In April, prices at the pump were 16.3% higher than they were in April 2009. This follows a 17.2% rise in the 12 months to March.

In addition, natural gas prices were no longer exerting significant downward pressure on the CPI. Prices for natural gas were 3.3% higher in April 2010 than they were a year earlier. This followed a 22.4% decline in the 12 months to March, and it was the first 12-month increase in natural gas prices in over a year.

Chart 2
Evolution of the natural gas price index since April 2007

index (2002=100)

Prices for the purchase of passenger vehicles also put upward pressure on the CPI for the fourth consecutive month in April. These prices increased 5.3%, following a 3.9% increase in March.

12-month change: Seven of the eight CPI components rise

Overall, seven of the eight major components of the CPI recorded price increases in the 12 months to April. The exception was clothing and footwear.

Chart 3

Transportation continues to exert the most upward pressure on the Consumer Price Index

Transportation prices, which increased 6.2% in the 12 months to April, exerted the strongest upward pressure on the all-items CPI for the sixth consecutive month. In addition to higher gasoline and passenger vehicle prices, consumers paid 5.6% more for passenger vehicle insurance premiums in April than a year ago.

Shelter costs rose 0.8% during the 12-month period to April, after declining 0.7% in March. Household utilities, which include electricity, water, natural gas, and fuel oil and other fuels, exerted the most upward pressure on the index. Price increases were also observed for property taxes and homeowner's replacement costs.

On the other hand, the mortgage interest cost index, which measures the change in the interest portion of payments on outstanding mortgage debt, fell 6.1% in April, following a 6.0% decrease in March.

Food prices advanced 1.0%, following a 1.3% increase in March. April's increase was the smallest since March 2008.

Upward pressure on the food index came largely from prices for food purchased from restaurants (+2.3%). Higher prices were also observed for sugar and confectionery and tomatoes. Prices fell for fresh fruit, meat, and bakery and cereal products.

Broad-based advances were observed in the health and personal care component, where prices were up 3.3%.

Prices for household operations, furnishings and equipment increased 1.1%, after a 1.4% increase in the 12 months to March. In April, the upward pressure on this index came primarily from higher prices for communications, other household goods and services, and child care and domestic services.

Prices increased 0.5% in the recreation, education and reading component in the 12 months to April. This follows a 0.7% rise between March 2009 and March 2010.

Prices for clothing and footwear fell 1.1%. The strongest downward pressure in this component came from lower prices for women's, children's, and men's clothing. Prices for women's and men's footwear also recorded small declines.

The provinces

As was the case in the past three months, the largest year-over-year increases occurred in the four Atlantic provinces. On the other hand, Central Canada and three Western provinces posted higher 12-month price increases in April, compared with March.

Chart 4

Higher price increases in Central Canada and three Western provinces compared with March

In every province, the most significant upward pressure came from higher gasoline prices.

In Ontario, prices rose 2.2% in the 12 months to April. This was due primarily to higher prices for gasoline, passenger vehicle insurance premiums, and the purchase of passenger vehicles. Also, prices for natural gas increased 3.7% in April, after declining 36.3% in March. April's increase was the first 12-month increase since March 2009.

Prices went up 2.1% in Saskatchewan in the 12 months to April, after increasing 1.1% in March. These higher price increases were attributable mainly to less downward pressure from natural gas prices. Prices for natural gas fell 5.6% in the 12 months to April, following a 26.1% decline in March.

In Alberta, prices rose 1.6%, following a 1.0% increase in March. Upward pressure came mainly from gasoline prices and the cost of purchasing passenger vehicles. In addition, there was less downward pressure from prices for electricity.

Prices in British Columbia rose 1.0% in April compared with the same month last year, after a 0.5% increase in March. This faster increase in April was due mainly to the turnaround in natural gas prices which rose 7.0% in the 12 months to April, compared with an 8.2% drop in March.

Month-over-month seasonally unadjusted CPI increases

Consumer prices prior to seasonal adjustment rose 0.3% in April, after remaining unchanged in March.

Seven of the eight major components of the CPI recorded month-over-month increases in April. The exception was food.

Chart 5
Seven of eight CPI components increase in April, month-over-month

Monthly increases in the shelter index (+0.6%) were primarily driven by higher prices for natural gas, homeowner's replacement costs, and prices for electricity. On the other hand, downward pressure from mortgage interest costs mitigated the overall increase in the shelter index.

Increases in the health and personal care index (+1.1%) were due mainly to upward price movements for dental care.

The cost of transportation rose 0.3% in April. Prices for inter-city transportation and the purchase of passenger vehicles exerted the most upward pressure on the index.

In contrast, food prices fell 0.2% due to month-over-month decline in prices for fresh fruit, non-alcoholic beverages, and bakery and cereal products.

Seasonally adjusted monthly CPI increases

On a seasonally adjusted monthly basis, the CPI rose 0.1% from March to April, after decreasing 0.1% from February to March. April's increase was due mainly to a 0.6% rise in the shelter component. Higher prices for natural gas and homeowner's replacement costs largely accounted for the upward movement within this index.

12-month change in the Bank of Canada's core index

The Bank of Canada's core index advanced 1.9% over the 12 months to April, following a 1.7% rise in March. April's increase was due primarily to a rise in prices for the purchase of passenger vehicles, passenger vehicle insurance premiums, property taxes, and food purchased from restaurants.

On a month-to-month basis, the core index prior to seasonal adjustment rose 0.3% in April, after posting a 0.2% decline in March.

The seasonally adjusted monthly core index rose 0.2% in April, following a 0.3% decline in March.

Table 14
Average retail prices, monthly, Canada

	CANSIM vector number	February 2010	March 2010	April 2010
dollars ¹				
Round steak, 1 kilogram	(v735165)	12.52	12.37	12.54
Sirloin steak, 1 kilogram	(v735176)	14.60	15.33	15.36
Prime rib roast, 1 kilogram	(v735187)	21.36	20.92	20.21
Blade roast, 1 kilogram	(v735198)	9.85	10.21	10.14
Stewing beef, 1 kilogram	(v735209)	9.27	9.26	9.60
Ground beef, regular, 1 kilogram	(v735220)	7.37	7.32	7.38
Pork chops, 1 kilogram	(v735221)	9.33	9.02	9.24
Chicken, 1 kilogram	(v735223)	6.35	6.36	6.49
Bacon, 500 grams	(v735166)	4.62	4.78	4.60
Wiensers, 450 grams	(v735167)	3.10	2.97	3.14
Canned sockeye salmon, 213 grams	(v735168)	3.20	3.23	3.11
Homogenized milk, 1 litre	(v735169)	2.23	2.23	2.22
Partly skimmed milk, 1 litre	(v735170)	2.16	2.16	2.16
Butter, 454 grams	(v735171)	4.37	4.35	4.28
Processed cheese food slices, 250 grams	(v735172)	2.75	2.78	2.75
Evaporated milk, 385 millilitres	(v735173)	2.00	1.95	1.97
Eggs, 1 dozen	(v735174)	2.71	2.67	2.68
Bread, 675 grams	(v735175)	2.54	2.55	2.52
Soda crackers, 450 grams	(v735177)	2.53	2.57	2.51
Macaroni, 500 grams	(v735178)	1.41	1.40	1.33
Flour, 2.5 kilograms	(v735179)	4.71	4.71	4.74
Corn flakes, 675 grams	(v735180)	4.07	4.15	4.00
Apples, 1 kilogram	(v735181)	3.11	3.30	3.28
Bananas, 1 kilogram	(v735182)	1.66	1.65	1.62
Grapefruits, 1 kilogram	(v735183)	2.44	2.35	2.34
Oranges, 1 kilogram	(v735184)	2.47	2.54	2.33
Apple juice, canned, 1.36 litres	(v735185)	1.91	1.84	1.93
Orange juice, tetra-brick, 1 litre	(v735186)	3.73	3.86	3.81
Carrots, 1 kilogram	(v735189)	1.40	1.58	1.68
Celery, 1 kilogram	(v735190)	2.81	2.34	2.28
Mushrooms, 1 kilogram	(v735191)	7.67	7.80	7.98
Onions, 1 kilogram	(v735192)	1.28	1.57	2.15
Potatoes, 4.54 kilograms	(v735193)	4.25	4.24	4.22
French fried potatoes, frozen, 1 kilogram	(v735194)	2.22	2.20	2.21
Baked beans, canned, 398 millilitres	(v735195)	1.10	1.09	1.08
Tomatoes, canned, 796 millilitres	(v735196)	1.58	1.58	1.58
Tomato juice, canned, 1.36 litres	(v735197)	2.10	2.14	1.96
Ketchup, 1 litre	(v735199)	3.09	3.06	2.85
Sugar, white, 2 kilograms	(v735200)	2.91	3.00	2.99
Coffee, roasted, 300 grams	(v735201)	4.79	4.85	4.77
Coffee, instant, 200 grams	(v735202)	5.56	5.58	5.30
Tea (72 bags)	(v735203)	4.18	4.15	4.38
Cooking or salad oil, 1 litre	(v735204)	4.06	4.07	4.07
Soup, canned, 284 millilitres	(v735205)	1.02	1.02	1.05
Baby food, 128 millilitres	(v735206)	0.82	0.80	0.80
Peanut butter, 500 grams	(v735207)	3.03	3.02	3.01

Data quality, concepts and methodology

Definition

The Consumer Price Index (CPI) is an indicator of the changes in consumer prices experienced by the target population. The CPI measures price change by comparing, through time, the cost of a fixed basket of commodities. This basket is based on the expenditures of the target population in a certain reference period, currently 2005. Since the basket contains commodities of unchanging or equivalent quantity and quality, the index reflects only pure price movements.

Separate CPIs are published for Canada, the ten provinces, Whitehorse, Yellowknife and Iqaluit. Some CPI information is also available for an additional sixteen urban centres. Since the CPI is a measure of price change from one time period to another, it cannot be used to indicate differences in price levels between provinces or urban centres.

Population coverage

The population targeted by the CPI consists of families and individuals living in urban and rural private households. For practical reasons, residents of the Territories outside Whitehorse, Yellowknife and Iqaluit are not represented by the index. Prior to February 1995, the target population consisted of private households in Canadian urban centres with a population of 30,000 or more.

Time reference

The CPI compares, in percentage terms, prices in any given time period to prices in the official base period which, at present, is 2002=100. The official time base was changed from 1992=100 to 2002=100 starting with the CPI for May 2007. The change is strictly an arithmetic conversion which alters the index levels but leaves the percentage changes between any two periods intact, except for differences in rounding.

Percent versus index point changes

The movements of the indexes from one month to another are expressed as percent changes rather than changes in index points. Index point changes are affected by the level of the index which, in turn, depends on the time base of the particular index. The percentage change between any two time periods can be readily calculated by dividing the index point difference between the two time periods by the index for the earlier period and multiplying the result by one hundred.

Price coverage

The prices used in the CPI calculation are final prices, inclusive of excise and other indirect taxes paid by consumers. In particular, they include the Goods and Services Tax (GST), as well as provincial retail sales taxes wherever applicable. In regions where the GST and provincial retail sales taxes have been combined, the Harmonized Sales Tax (HST) is included. It follows that the CPI can change as a result of modifications to any of these taxes.

The selection of commodities and the outlets from which prices are collected is judgmental, other than for rents and traveler accommodation. The number of prices required for a given commodity depends on the importance and the nature of the commodity. The samples are designed to represent volume selling commodities and outlets.

The principal objective of the sample design is to ensure an informative, reliable and impartial picture of consumer inflation at the national and provincial levels.

Price collection for a given month's index is carried out during the first three weeks of the month. Although prices for most CPI commodities are collected monthly, prices for commodities having less frequent price changes (e.g. property taxes and electricity rates) are collected at intervals longer than one month. Special pricings are carried out where there is evidence that significant price changes have occurred between scheduled pricing periods.

Weights and linking

The CPI maintains fixed quantitative proportions (weights) between commodities during the life of a given basket. The baskets are updated periodically to take into account changes in consumer expenditure patterns. In May 2007, the basket reflecting the 2005 expenditure patterns replaced the 2001 basket. The continuity of the CPI series is maintained by "linking" the corresponding indexes obtained from consecutive baskets.

The CPI is calculated as a weighted average of specified commodity price indexes. The weights are derived from Survey of Household Spending data. Text table 1 compares the expenditure shares of the two most recent CPI baskets, i.e. the 2005 basket as it was reflected in the CPI in May 2007 and the 2001 basket. Because both sets of weights are expressed in April 2007 or "link month" prices, the differences reflect the shifts in the relative quantities purchased between the two baskets.

When reconstructing or re-aggregating published CPI series, the changes in weights and the linking procedures must be taken into account. For a description of the methodology required to reconstruct or re-aggregate CPI series, see **The Consumer Price Index Reference Paper** catalogue no. 62-553-X (Occasional) or contact Consumer Prices Division.

Text table 1

Comparison of the 2005 and 2001 distribution¹ of expenditures used in the Consumer Price Index, by major component, for Canada

	2005 Expenditures		2001 Expenditures
	Expressed in 2005 prices	Expressed in April 2007 prices	Expressed in April 2007 prices
	percent		
Major Components			
All-items	100.0	100.0	100.0
Food	16.9	17.0	17.1
Shelter	25.7	26.6	27.7
Household operations, furnishings and equipment	11.4	11.1	10.2
Clothing and footwear	5.6	5.4	5.1
Transportation	19.6	19.9	20.2
Health and personal care	4.8	4.7	4.4
Recreation, education and reading	13.0	12.2	11.2
Alcoholic beverages and tobacco products	3.1	3.1	4.2

1. Figures may not add to 100% due to rounding.

Starting with the October 2006 Consumer Price Index (CPI), Statistics Canada produces and disseminates the Core CPI as defined by the Bank of Canada.

The measure of Core CPI excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on Core CPI, please consult the Bank of Canada Web site. <http://www.bankofcanada.ca/en/inflation/index.htm>.

Statistics Canada also calculates, on behalf of the Bank of Canada, a seasonally adjusted Core CPI. This series is available through CANSIM, Statistics Canada's official database, or by contacting us through the means mentioned on the inside cover of this publication.

Whitehorse, Yellowknife and Iqaluit indexes

The relatively small size of the housing market in these three cities makes it difficult to construct reliable price indexes for new houses. To compensate, the price movements of rental accommodation are used to approximate the price movements of new houses. The rent information itself is collected using different pricing frequencies and collection methods than in the rest of the country. Because of these problems, the indexes for Rented Accommodation and Owned Accommodation are not published for these three cities. Further, the all-items indexes published for these three cities are not strictly comparable with the same indexes for the provinces or the other sixteen cities.

Calculation of urban centre indexes

With the introduction of the 1992 basket, emphasis was shifted from urban centre data to provincial data. Urban Centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of Shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart (or, in the cases of Montréal, Toronto, and Vancouver, a sub-provincial counterpart) is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.

Seasonal adjustment

A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as variations in climate and regular institutional events such as vacations and statutory holidays. Seasonally adjusted series are calculated using Statistics Canada's X-12 ARIMA program. Time series with no detectable seasonal movements remain unchanged from the official series. The official unadjusted series for all-items index, core consumer price index, each of the eight major component indexes and three special aggregates (all-items excluding food, all-items excluding food and energy and all-items excluding 8 of the most volatile components (Bank of Canada definition)) are seasonally adjusted independently.

Each month, the previous month's seasonally adjusted index is subject to revision. On an annual basis, the seasonally adjusted values for the last three years are revised with the January data release. Since these revisions can lead to changes in both the levels and movements of the indexes, users employing the CPI for indexation purposes are advised to use the unadjusted indexes.

Explanatory notes for tables

and

Table 2 The Consumer Price Index, major components and special aggregates, Canada, seasonally adjusted

1. 2005 Consumer Price Index (CPI) basket weights at April 2007 prices, Canada.
2. Figures may not add to 100% due to rounding.
3. The measure of core Consumer Price Index (CPI) excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on core CPI, please consult the Bank of Canada Web site: <http://www.bankofcanada.ca/en/inflation/index.htm>.

Table 3 The Consumer Price Index, provinces, Whitehorse, Yellowknife and Iqaluit, not seasonally adjusted

1. Data for Iqaluit are on a December 2002=100 base (200212=100) and the Standard Geographical Classification (SGC) 2001. Previous to April 1, 1999, the town of Iqaluit formed part of the Northwest Territories. Subsequent to April 1, 1999, the town of Iqaluit formed part of the newly-created territory of Nunavut.

Table 4 The Consumer Price Index, major components and selected sub-groups, Canada, not seasonally adjusted

Table 4-1

1. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.

Table 4-2

1. In July 2004, the 2001 basket weights introduced with the January 2003 data were adjusted; the weights for mortgage interest cost were re-evaluated.
2. Due to changes in the Ontario electricity market that became effective May 1, 2002, it was necessary to adjust the treatment of electricity prices in the Consumer Price Index (CPI) for that province. A question and answer fact sheet that explains those changes is now available. To obtain the fact sheet on the treatment of electricity prices in Ontario, please contact CPD Dissemination Unit, Consumer Prices Division, telephone: (613) 951-9606, toll-free: 1-866-230-2248, fax: (613) 951-2848, e-mail: cpd-info-dpc@statcan.gc.ca.

Table 4-5

1. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 4-7

1. From April 2006, Statistics Canada changed its implementation of the price index formula used for traveller accommodation. As a result, data from April 2006 are not strictly comparable to earlier time periods.

Table 5 The Consumer Price Index for Canada, all-items, not seasonally adjusted, historical data

1. The annual average index is calculated as the average of the published 12 individual monthly indexes, rounded to one decimal place. Percentage changes between the annual average indexes are calculated based on these published rounded numbers. Between May 2007 and September 2007, the annual average percentage changes in Table 5 were calculated based on annual average indexes that were not rounded. As a result, some percentage changes were different by +/- 0.1 from the official percentage change. This problem only affected the annual average column of Table 5.

Table 6 Core Consumer Price Index (CPI) (Bank of Canada definition), not seasonally adjusted, historical data

1. The measure of core Consumer Price Index (CPI) excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on core CPI, please consult the Bank of Canada Web site: <http://www.bankofcanada.ca/en/inflation/index.htm>.
2. The annual average index is calculated as the average of the published 12 individual monthly indexes, rounded to one decimal place. Percentage changes between the annual average indexes are calculated based on these published rounded numbers.

Table 7 The Consumer Price Index for Canada, major components and special aggregates, not seasonally adjusted, historical data

1. Goods are physical or tangible commodities usually classified according to their life span into non-durable goods, semi-durable goods and durable goods. Non-durable goods are those goods that can be used up entirely in less than a year, assuming normal usage. For example, fresh food products, disposable cameras and gasoline are non-durable goods. Semi-durable goods are those goods that may last less than 12 months or greater than 12 months depending on the purpose to which they are put. For example, clothing, footwear and household textiles are semi-durable goods. Durable goods are those goods which may be used repeatedly or continuously over more than a year, assuming normal usage. For example, cars, audio and video equipment and furniture are durable goods.
2. A service in the Consumer Price Index (CPI) is characterized by valuable work performed by an individual or organization on behalf of a consumer, for example, car tune-ups, haircuts and city public transportation. Transactions classified as a service may include the cost of goods by their nature. Examples include food in restaurant food services and materials in clothing repair services.
3. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".

4. The annual index level is the average of the 12 individual monthly indexes.

Table 8 Annual average percentage changes for the Consumer Price Index

Table 8-1 and 8-2

1. The annual index level is the average of the 12 individual monthly indexes. The percentage change for a given calendar year is calculated using the annual average indexes.

Table 9 The Consumer Price Index, major components, selected sub-groups and special aggregates, provinces, Whitehorse and Yellowknife, not seasonally adjusted

Tables 9-1, 9-2, 9-3, 9-4, 9-5, 9-7, 9-8, 9-9, 9-10 and 9-11

1. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".
2. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.
3. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 9-6

1. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".
2. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.
3. Due to changes in the Ontario electricity market that became effective May 1, 2002, it was necessary to adjust the treatment of electricity prices in the Consumer Price Index (CPI) for that province. A question and answer fact sheet that explains those changes is now available. To obtain the fact sheet on the treatment of electricity prices in Ontario, please contact CPD Dissemination Unit, Consumer Prices Division, telephone: (613) 951-9606, toll-free: 1-866-230-2248, fax: (613) 951-2848, e-mail: cpd-info-dpc@statcan.gc.ca.
4. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 9-12

1. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".

2. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.
3. Part of the increase first recorded in the shelter index for Yellowknife for December 2004 inadvertently reflected rent increases that actually occurred earlier. As a result, the change in the shelter index was overstated in December 2004, and was understated in the previous two years. The shelter index series for Yellowknife has been corrected from December 2002. In addition, the Yellowknife all-items Consumer Price Index (CPI) and some Yellowknife special aggregate index series have also changed. Data for Canada and all other provinces and territories were not affected.
4. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 10 The all-items Consumer Price Index, provinces, Whitehorse, Yellowknife and Iqaluit, not seasonally adjusted, historical data

1. Data for Iqaluit are on a December 2002=100 base (200212=100) and the Standard Geographical Classification (SGC) 2001. Previous to April 1, 1999, the town of Iqaluit formed part of the Northwest Territories. Subsequent to April 1, 1999, the town of Iqaluit formed part of the newly-created territory of Nunavut.
2. The annual index level is the average of the 12 individual monthly indexes.

Table 11 The Consumer Price Index and selected sub-groups, by urban centre, not seasonally adjusted

1. With the introduction of the 1992 basket in January 1995, emphasis was shifted from urban centre data to provincial data. Urban centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart is used except in the cases of Montréal, Toronto, and Vancouver, where a sub-provincial counterpart is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.
2. Users of the urban centre indexes should note that, effective July 2007, Statistics Canada has corrected the weights of some urban centres that were in error in the Consumer Price Index 2005 basket update. The weights of St. John's, Charlottetown, Halifax, Saint John, Québec City, Montréal, Ottawa, Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary and Victoria were adjusted, while those of Toronto, Vancouver, Whitehorse, Yellowknife and Iqaluit were not. With this correction, the July 2007 level of each urban centre index has been restored to reflect the correct movement for May 2007 and June 2007. The published urban centre indexes for May and June 2007 will remain unchanged. The calculation of urban centre indexes is separate from the calculation of the provincial and national indexes. Therefore, the correction made to the urban centre weights has no effect at all on the provincial or national indexes. Published weight documentation was also not affected.
3. Formerly Ottawa (Ottawa-Gatineau, Ontario part), represents Ottawa only.

Table 12 The all-items Consumer Price Index by urban centre, not seasonally adjusted, historical data

1. With the introduction of the 1992 basket in January 1995, emphasis was shifted from urban centre data to provincial data. Urban centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart is used except in the cases of Montréal, Toronto, and Vancouver, where a sub-provincial counterpart is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.
2. Users of the urban centre indexes should note that, effective July 2007, Statistics Canada has corrected the weights of some urban centres that were in error in the Consumer Price Index 2005 basket update. The weights of St. John's, Charlottetown, Halifax, Saint John, Québec City, Montréal, Ottawa, Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary and Victoria were adjusted, while those of Toronto, Vancouver, Whitehorse, Yellowknife and Iqaluit were not. With this correction, the July 2007 level of each urban centre index has been restored to reflect the correct movement for May 2007 and June 2007. The published urban centre indexes for May and June 2007 will remain unchanged. The calculation of urban centre indexes is separate from the calculation of the provincial and national indexes. Therefore, the correction made to the urban centre weights has no effect at all on the provincial or national indexes. Published weight documentation was also not affected.
3. The annual index level is the average of the 12 individual monthly indexes.
4. Formerly Ottawa (Ottawa-Gatineau, Ontario part), represents Ottawa only.

Table 14 Average retail prices, monthly, Canada

1. Prices are expressed in dollars, except for the price of gasoline which is expressed in cents per litre.

Average retail prices for food, household supplies, personal care items, cigarettes and gasoline

Table 14 shows, for the current month and the two previous months, average prices for selected food, household supplies, personal care items, cigarettes and for gasoline.

Prices for these items are collected as part of the regular monthly CPI survey. Prices for the selected food, household supply and personal care items are observed in food supermarkets, while prices for cigarettes are collected in supermarkets, department stores, drug stores and tobacco shops. Average prices for each commodity are calculated as a weighted average of the average prices in the observed urban centres using the population of these urban centres as weights.

The commodities which are priced can vary in quality between outlets or between urban centres. This is the reason why average prices are not published for each of those urban centres. Brands and outlets can also vary from month to month. Therefore, average prices may not necessarily be fully comparable from one month to another and should not be used as an appropriate measure of pure price change through time. A matched commodity and outlet sample is used for the CPI to determine the pure price movement of commodities through time.

Table 15 Inter-city indexes of retail price differentials, as of October 2008, for selected groups of consumer goods and services, not seasonally adjusted

Purpose and Scope

Table 15 shows estimates of retail price differences between 11 Canadian cities in all 10 provinces, as of October 2008. These estimates are based on a selection of commodities (goods and services) purchased by consumers in each of the 11 cities.

These estimates should not be interpreted as a measure of differences in the cost-of-living between cities. The indexes provide price comparisons for a selection of commodities only, and are not meant to give an exhaustive comparison of all goods and services purchased by consumers. Additionally, the shelter price concept used for these indexes is not conducive to making cost-of-living type comparisons between cities (see below).

Methodology

In order to produce optimal Inter-city indexes, commodity comparisons were initially made by pairing cities that are in close geographic proximity. The resulting price level comparisons were then extended to include comparisons between all of the cities, using a chaining procedure. The following initial pairings were used:

St. John's	Halifax
Charlottetown-Summerside	Halifax
Saint John	Halifax
Ottawa	Halifax
Toronto	Montréal
Ottawa	Toronto
Toronto	Winnipeg
Regina	Winnipeg
Edmonton	Winnipeg
Edmonton	Vancouver

Reliable Inter-city price comparisons require that the selected commodities be very similar across cities. This ensures that the variation in index levels between cities is due to pure price differences and not to differences in the attributes of the commodities, such as size and/or quality.

Within each city pair, commodity price quotes were matched on the basis of detailed descriptions. Whenever possible, commodities were matched by brand, quantity and with some regard for the comparability of retail outlets from which they were selected.

Additionally, the target prices for this study are final retail prices and as such, include all sales taxes and levies applied to consumer commodities within a city. This can be an important source of variation when explaining differences in inter-city price levels.

It should be noted that price data for the Inter-city indexes is drawn from the sample of monthly price data collected for the Consumer Price Index (CPI). Given that the CPI sample is optimized to produce accurate price comparisons through time, and not across regions, the number of matched price quotes between cities can be small. It should also be noted that, especially in periods when prices are highly volatile, the timing of the commodity price comparison can significantly affect city-to-city retail price relationships.

The weights used for aggregating the city indexes into the all-items Inter-city index are based on the expenditures of consumers living in each of the 11 cities. The weights are currently based on 2005 consumer expenditure data.

The all-items Inter-city index for a particular city is compared to the average of all 11 cities, which is equal to 100. For example, an index value of 102 for a particular city means that prices for the measured commodities are 2% higher than the weighted, combined city average.

Additional Information on Shelter

Shelter prices were absent from the Inter-city index program prior to 1999 because of methodological and conceptual issues associated with their measurement. The diverse nature of shelter means that accurate matches between cities are often difficult to make.

To account for some of these difficulties, a rental equivalence approach is used to construct the Inter-city price indexes for owned accommodation. Such an approach uses market rents as an approximation to the cost of the shelter services consumed by homeowners in each city. It is important to note that this approach may not be suitable for the needs of all users. For instance, since the rental equivalence approach does not represent an out-of-pocket expenditure, the indexes should not be used for measuring differences in the purchasing power of homeowners across cities.

Footnotes for Table 15

1. The weights shown are rounded 2005 basket weights at April 2007 prices for Canada. They are provided for illustration only; the weights actually used are combined city weights with adjustments for price changes up until October 2008.
2. Includes the following subgroups: sugar and syrup, confectionery items, margarine, other edible fat and oil items, coffee, tea, condiments, spices and vinegar, soup, infant and junior foods, pre-cooked frozen food preparations, non-alcoholic beverages and all other food preparations.

Canada

The Consumer Price Index

This publication presents the highlights and analysis of the movement of the Consumer Price Index (CPI) and its components over the month and year proceeding the reference period. It also provides a range of the most recent tables and graphs on the Canadian CPI.

Detailed CPIs are published simultaneously for Canada, the ten provinces, Whitehorse and Yellowknife. In addition, some information is available for some cities across Canada. The Consumer Price Index for a given month is usually published in the third week of the following month, and it is not revised once it has been published.

The CPI is an indicator of changes in consumer prices experienced by Canadians. It is obtained by comparing through time, the cost of a fixed basket of goods and services purchased by consumers. Since the basket contains items of unchanging or equivalent quantity and quality, the index reflects only pure price movements.

The CPI is an important indicator of how the Canadian economy is performing. This index, used by governments, businesses and private citizens, can affect interest rates, taxes, wages, pensions, and many other monetary transfers.

The Consumer Price Index

Highlights

- Consumer prices rose 1.4% in the 12 months to May, following a 1.8% increase in April. On a seasonally adjusted monthly basis, consumer prices declined 0.1% from April to May.

Briefing notes

Highlights:

- Consumer prices rose 1.4% in the 12 months to May, following a 1.8% increase in April. On a non-seasonally adjusted monthly basis, consumer prices rose 0.3% in May, the same rate of increase posted the previous month.

All-items Consumer Price Index (CPI):

- In May, prices at the pump were 6.9% higher than a year earlier after increasing 16.3% the previous month.
- In addition, natural gas prices rose 4.7% in May, after posting a 3.3% gain in April. The increase recorded in May was the second consecutive rise after several months of decline.
- Prices for fuel oil and other fuels rose 19.9% in May.
- Energy prices rose 6.2% between May 2009 and May 2010, following a 9.8% increase during the 12-month period to April.
- Prices for the purchase of passenger vehicles rose for the fifth consecutive month. These prices increased 5.1% following a 5.3% increase in April.
- Six of the eight major components of the CPI recorded price increases in the 12 months to May.

Main contributors to the 12-month change in the CPI:

Main upward contributors:

- Purchase of passenger vehicles (+5.1%)
- Gasoline (+6.9%)
- Passenger vehicle insurance premiums (+5.1%)
- Homeowner's replacement cost (+4.4%)
- Telephone services (+5.4%)

Main downward contributors:

- Mortgage interest cost (-5.4%)
- Furniture (-4.3%)
- Video equipment (-15.2%)
- Women's clothing (-3.7%)

Main contributors to the monthly change in the CPI, not seasonally adjusted:

Main upward contributors:

- Electricity (+4.2%)
- Passenger vehicle insurance premiums (+2.6%)
- Traveller accommodation (+4.4 %)
- Homeowner's replacement cost (+0.8%)
- Fresh fruit (+3.2 %)

Main downward contributors:

- Women's clothing (-4.3%)
- Gasoline (-0.5%)
- Non-alcoholic beverages (-2.6 %)
- Fresh vegetables (-2.0 %)
- Men's clothing (-1.0%)

Annual and monthly percentage change in the most quoted indexes, not seasonally adjusted

Analysis

Consumer prices rose 1.4% in the 12 months to May, following a 1.8% increase in April.

Chart 1

The 12-month change in the Consumer Price Index and the CPI excluding energy

Overall, energy prices rose 6.2% between May 2009 and May 2010, following a 9.8% increase during the 12-month period to April. Excluding energy, the Consumer Price Index (CPI) rose 1.0% in May, after posting a 1.1% increase in April.

In May, prices at the pump were 6.9% higher than a year earlier, after increasing 16.3% the previous month.

Chart 2
Evolution of the gasoline price index since May 2007

index (2002=100)

In addition, natural gas prices rose 4.7% in May, after posting a 3.3% gain in April. The increase recorded in May was the second consecutive rise after several months of decline.

Prices for fuel oil and other fuels rose 19.9% in May.

Prices for the purchase of passenger vehicles rose for the fifth consecutive month. These prices increased 5.1% following a 5.3% increase in April.

12-month change: Six of the eight CPI components rise

Overall, six of the eight major components of the CPI recorded price increases in the 12 months to May. The exceptions were clothing and footwear as well as recreation, education and reading.

Chart 3

Transportation posts the largest price increases

Transportation prices rose 4.1% in the 12 months to May, after increasing 6.2% in April. In addition to paying higher prices for gasoline and passenger vehicles, consumers paid 5.1% more for passenger vehicle insurance premiums.

Shelter costs rose 1.3% in the 12 months to May, after increasing 0.8% in April. Homeowner's replacement costs rose 4.4% after posting a 2.9% increase in April. In addition to paying higher prices for natural gas, and fuel oil and other fuels, consumers also paid more for electricity.

On the other hand, the mortgage interest cost index, which measures the change in the interest portion of payments on outstanding mortgage debt, declined 5.4% in May, following a 6.1% decrease in April.

Food prices went up 0.8%, following a 1.0% increase in April. The increase posted in May was the smallest since March 2008. Prices for food purchased from restaurants rose 2.2%. Prices also increased for sugar and confectionery, and tomatoes while prices for fresh fruit and potatoes fell.

Consumers paid 0.9% more for household operations, furnishings and equipment in the 12 months to May. This increase followed a 1.1% rise recorded in the 12 months to April. Higher prices were recorded for telephone services and child care.

Prices in the health and personal care component were up 2.2%. Most of the indexes within this component posted increases.

Prices in the recreation, education and reading component fell 0.2% in the 12 months to May. This was the first decline in this index since November 2008. Prices for video equipment and computer equipment and supplies dropped. However, consumers paid more for cablevision and satellite services.

Prices for clothing and footwear declined 1.3%. In this component, lower prices were recorded for women's and children's clothing. Prices for women's footwear also fell.

The provinces

Consumer prices rose in all provinces in the 12 months to May, but at a slower pace than in April. Ontario and three of the four Atlantic provinces registered the largest year-over-year increases.

Chart 4

Smaller price increases in all provinces compared to the previous month

In Ontario, consumer prices rose 1.9% in May. Prices for the purchase of passenger vehicles were up as were passenger vehicle insurance premiums. Additionally, gasoline prices rose 4.9%, following a 17.6% increase in April.

Although gasoline prices rose in all provinces, the increases observed in the Atlantic provinces were among the largest. Atlantic Canada also registered price increases for fuel oil and other fuels.

Prices rose 0.5% in Manitoba in the 12 months to May, following a 1.0% increase in April. Gasoline prices and the cost of purchasing passenger vehicles were up, whereas prices for natural gas and home and mortgage insurance premiums declined.

In British Columbia, prices advanced 0.6% in May, after rising 1.0% in April. Gasoline and electricity prices rose 9.6% and 9.3%, respectively.

The non-seasonally adjusted monthly CPI rises

In May, consumer prices prior to seasonal adjustment rose 0.3%, the same rate of increase posted the previous month.

Six of the eight major components of the CPI registered month-to-month increases in May: shelter; transportation; recreation, education and reading; food; alcoholic beverages and tobacco products and household operations, furnishings and equipment.

Chart 5
Six of eight CPI components increase in May, month-over-month

Shelter prices rose 0.5%. Within this component, month-to-month increases in electricity prices and homeowner's replacement costs were observed.

Transportation prices were up 0.6%. Passenger vehicle insurance premiums and prices for the purchase of passenger vehicles increased. Consumers paid 0.5% less at the pump for gasoline in May than they did in April.

Prices for recreation, education and reading registered a month-to-month increase of 0.7% in May. Within this component, prices for traveller accommodation increased 4.4% between April and May.

On the other hand, consumers paid less for women's clothing (-4.3%), non-alcoholic beverages (-2.6%) and fresh vegetables (-2.0%).

Seasonally adjusted monthly CPI falls

On a seasonally adjusted monthly basis, the CPI declined 0.1% in May, after remaining unchanged from March to April. The clothing and footwear index fell 0.4%. Prices also declined in the health and personal care component, in recreation, education and reading, as well as in food.

12-month change in the Bank of Canada's core index

The Bank of Canada's core index advanced 1.8% in the 12 months to May, following a 1.9% rise in April. Price increases were recorded for the purchase of passenger vehicles, passenger vehicle insurance premiums, homeowner's replacement costs and telephone services.

On a month-to-month basis, the core index before seasonal adjustment rose 0.3%, the same rate of increase posted the previous month.

The seasonally adjusted monthly core index rose 0.1% in May, after increasing 0.2% in April.

Data quality, concepts and methodology

Definition

The Consumer Price Index (CPI) is an indicator of the changes in consumer prices experienced by the target population. The CPI measures price change by comparing, through time, the cost of a fixed basket of commodities. This basket is based on the expenditures of the target population in a certain reference period, currently 2005. Since the basket contains commodities of unchanging or equivalent quantity and quality, the index reflects only pure price movements.

Separate CPIs are published for Canada, the ten provinces, Whitehorse, Yellowknife and Iqaluit. Some CPI information is also available for an additional sixteen urban centres. Since the CPI is a measure of price change from one time period to another, it cannot be used to indicate differences in price levels between provinces or urban centres.

Population coverage

The population targeted by the CPI consists of families and individuals living in urban and rural private households. For practical reasons, residents of the Territories outside Whitehorse, Yellowknife and Iqaluit are not represented by the index. Prior to February 1995, the target population consisted of private households in Canadian urban centres with a population of 30,000 or more.

Time reference

The CPI compares, in percentage terms, prices in any given time period to prices in the official base period which, at present, is 2002=100. The official time base was changed from 1992=100 to 2002=100 starting with the CPI for May 2007. The change is strictly an arithmetic conversion which alters the index levels but leaves the percentage changes between any two periods intact, except for differences in rounding.

Percent versus index point changes

The movements of the indexes from one month to another are expressed as percent changes rather than changes in index points. Index point changes are affected by the level of the index which, in turn, depends on the time base of the particular index. The percentage change between any two time periods can be readily calculated by dividing the index point difference between the two time periods by the index for the earlier period and multiplying the result by one hundred.

Price coverage

The prices used in the CPI calculation are final prices, inclusive of excise and other indirect taxes paid by consumers. In particular, they include the Goods and Services Tax (GST), as well as provincial retail sales taxes wherever applicable. In regions where the GST and provincial retail sales taxes have been combined, the Harmonized Sales Tax (HST) is included. It follows that the CPI can change as a result of modifications to any of these taxes.

The selection of commodities and the outlets from which prices are collected is judgmental, other than for rents and traveler accommodation. The number of prices required for a given commodity depends on the importance and the nature of the commodity. The samples are designed to represent volume selling commodities and outlets.

The principal objective of the sample design is to ensure an informative, reliable and impartial picture of consumer inflation at the national and provincial levels.

Price collection for a given month's index is carried out during the first three weeks of the month. Although prices for most CPI commodities are collected monthly, prices for commodities having less frequent price changes (e.g. property taxes and electricity rates) are collected at intervals longer than one month. Special pricings are carried out where there is evidence that significant price changes have occurred between scheduled pricing periods.

Weights and linking

The CPI maintains fixed quantitative proportions (weights) between commodities during the life of a given basket. The baskets are updated periodically to take into account changes in consumer expenditure patterns. In May 2007, the basket reflecting the 2005 expenditure patterns replaced the 2001 basket. The continuity of the CPI series is maintained by "linking" the corresponding indexes obtained from consecutive baskets.

The CPI is calculated as a weighted average of specified commodity price indexes. The weights are derived from Survey of Household Spending data. Text table 1 compares the expenditure shares of the two most recent CPI baskets, i.e. the 2005 basket as it was reflected in the CPI in May 2007 and the 2001 basket. Because both sets of weights are expressed in April 2007 or "link month" prices, the differences reflect the shifts in the relative quantities purchased between the two baskets.

When reconstructing or re-aggregating published CPI series, the changes in weights and the linking procedures must be taken into account. For a description of the methodology required to reconstruct or re-aggregate CPI series, see **The Consumer Price Index Reference Paper** catalogue no. 62-553-X (Occasional) or contact Consumer Prices Division.

Text table 1

Comparison of the 2005 and 2001 distribution¹ of expenditures used in the Consumer Price Index, by major component, for Canada

	2005 Expenditures		2001 Expenditures
	Expressed in 2005 prices	Expressed in April 2007 prices	Expressed in April 2007 prices
	percent		
Major Components			
All-items	100.0	100.0	100.0
Food	16.9	17.0	17.1
Shelter	25.7	26.6	27.7
Household operations, furnishings and equipment	11.4	11.1	10.2
Clothing and footwear	5.6	5.4	5.1
Transportation	19.6	19.9	20.2
Health and personal care	4.8	4.7	4.4
Recreation, education and reading	13.0	12.2	11.2
Alcoholic beverages and tobacco products	3.1	3.1	4.2

1. Figures may not add to 100% due to rounding.

Starting with the October 2006 Consumer Price Index (CPI), Statistics Canada produces and disseminates the Core CPI as defined by the Bank of Canada.

The measure of Core CPI excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on Core CPI, please consult the Bank of Canada Web site. <http://www.bankofcanada.ca/en/inflation/index.htm>.

Statistics Canada also calculates, on behalf of the Bank of Canada, a seasonally adjusted Core CPI. This series is available through CANSIM, Statistics Canada's official database, or by contacting us through the means mentioned on the inside cover of this publication.

Whitehorse, Yellowknife and Iqaluit indexes

The relatively small size of the housing market in these three cities makes it difficult to construct reliable price indexes for new houses. To compensate, the price movements of rental accommodation are used to approximate the price movements of new houses. The rent information itself is collected using different pricing frequencies and collection methods than in the rest of the country. Because of these problems, the indexes for Rented Accommodation and Owned Accommodation are not published for these three cities. Further, the all-items indexes published for these three cities are not strictly comparable with the same indexes for the provinces or the other sixteen cities.

Calculation of urban centre indexes

With the introduction of the 1992 basket, emphasis was shifted from urban centre data to provincial data. Urban Centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of Shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart (or, in the cases of Montréal, Toronto, and Vancouver, a sub-provincial counterpart) is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.

Seasonal adjustment

A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as variations in climate and regular institutional events such as vacations and statutory holidays. Seasonally adjusted series are calculated using Statistics Canada's X-12 ARIMA program. Time series with no detectable seasonal movements remain unchanged from the official series. The official unadjusted series for all-items index, core consumer price index, each of the eight major component indexes and three special aggregates (all-items excluding food, all-items excluding food and energy and all-items excluding 8 of the most volatile components (Bank of Canada definition)) are seasonally adjusted independently.

Each month, the previous month's seasonally adjusted index is subject to revision. On an annual basis, the seasonally adjusted values for the last three years are revised with the January data release. Since these revisions can lead to changes in both the levels and movements of the indexes, users employing the CPI for indexation purposes are advised to use the unadjusted indexes.

Table 1 The Consumer Price Index, major components and special aggregates, Canada, not seasonally adjusted

and

Table 2 The Consumer Price Index, major components and special aggregates, Canada, seasonally adjusted

1. 2005 Consumer Price Index (CPI) basket weights at April 2007 prices, Canada.
2. Figures may not add to 100% due to rounding.
3. The measure of core Consumer Price Index (CPI) excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on core CPI, please consult the Bank of Canada Web site: <http://www.bankofcanada.ca/en/inflation/index.htm>.

Table 3 The Consumer Price Index, provinces, Whitehorse, Yellowknife and Iqaluit, not seasonally adjusted

1. Data for Iqaluit are on a December 2002=100 base (200212=100) and the Standard Geographical Classification (SGC) 2001. Previous to April 1, 1999, the town of Iqaluit formed part of the Northwest Territories. Subsequent to April 1, 1999, the town of Iqaluit formed part of the newly-created territory of Nunavut.

Table 4 The Consumer Price Index, major components and selected sub-groups, Canada, not seasonally adjusted

Table 4-1

1. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.

Table 4-2

1. In July 2004, the 2001 basket weights introduced with the January 2003 data were adjusted; the weights for mortgage interest cost were re-evaluated.
2. Due to changes in the Ontario electricity market that became effective May 1, 2002, it was necessary to adjust the treatment of electricity prices in the Consumer Price Index (CPI) for that province. A question and answer fact sheet that explains those changes is now available. To obtain the fact sheet on the treatment of electricity prices in Ontario, please contact CPD Dissemination Unit, Consumer Prices Division, telephone: (613) 951-9606, toll-free: 1-866-230-2248, fax: (613) 951-2848, e-mail: cpd-info-dpc@statcan.gc.ca.

Table 4-5

1. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 4-7

1. From April 2006, Statistics Canada changed its implementation of the price index formula used for traveller accommodation. As a result, data from April 2006 are not strictly comparable to earlier time periods.

Table 5 The Consumer Price Index for Canada, all-items, not seasonally adjusted, historical data

1. The annual average index is calculated as the average of the published 12 individual monthly indexes, rounded to one decimal place. Percentage changes between the annual average indexes are calculated based on these published rounded numbers. Between May 2007 and September 2007, the annual average percentage changes in Table 5 were calculated based on annual average indexes that were not rounded. As a result, some percentage changes were different by +/- 0.1 from the official percentage change. This problem only affected the annual average column of Table 5.

Table 6 Core Consumer Price Index (CPI) (Bank of Canada definition), not seasonally adjusted, historical data

1. The measure of core Consumer Price Index (CPI) excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on core CPI, please consult the Bank of Canada Web site: <http://www.bankofcanada.ca/en/inflation/index.htm>.
2. The annual average index is calculated as the average of the published 12 individual monthly indexes, rounded to one decimal place. Percentage changes between the annual average indexes are calculated based on these published rounded numbers.

Table 7 The Consumer Price Index for Canada, major components and special aggregates, not seasonally adjusted, historical data

1. Goods are physical or tangible commodities usually classified according to their life span into non-durable goods, semi-durable goods and durable goods. Non-durable goods are those goods that can be used up entirely in less than a year, assuming normal usage. For example, fresh food products, disposable cameras and gasoline are non-durable goods. Semi-durable goods are those goods that may last less than 12 months or greater than 12 months depending on the purpose to which they are put. For example, clothing, footwear and household textiles are semi-durable goods. Durable goods are those goods which may be used repeatedly or continuously over more than a year, assuming normal usage. For example, cars, audio and video equipment and furniture are durable goods.
2. A service in the Consumer Price Index (CPI) is characterized by valuable work performed by an individual or organization on behalf of a consumer, for example, car tune-ups, haircuts and city public transportation. Transactions classified as a service may include the cost of goods by their nature. Examples include food in restaurant food services and materials in clothing repair services.
3. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".

4. The annual index level is the average of the 12 individual monthly indexes.

Table 8 Annual average percentage changes for the Consumer Price Index

Table 8-1 and 8-2

1. The annual index level is the average of the 12 individual monthly indexes. The percentage change for a given calendar year is calculated using the annual average indexes.

Table 9 The Consumer Price Index, major components, selected sub-groups and special aggregates, provinces, Whitehorse and Yellowknife, not seasonally adjusted

Tables 9-1, 9-2, 9-3, 9-4, 9-5, 9-7, 9-8, 9-9, 9-10 and 9-11

1. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".
2. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.
3. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 9-6

1. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".
2. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.
3. Due to changes in the Ontario electricity market that became effective May 1, 2002, it was necessary to adjust the treatment of electricity prices in the Consumer Price Index (CPI) for that province. A question and answer fact sheet that explains those changes is now available. To obtain the fact sheet on the treatment of electricity prices in Ontario, please contact CPD Dissemination Unit, Consumer Prices Division, telephone: (613) 951-9606, toll-free: 1-866-230-2248, fax: (613) 951-2848, e-mail: cpd-info-dpc@statcan.gc.ca.
4. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 9-12

1. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".

2. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.
3. Part of the increase first recorded in the shelter index for Yellowknife for December 2004 inadvertently reflected rent increases that actually occurred earlier. As a result, the change in the shelter index was overstated in December 2004, and was understated in the previous two years. The shelter index series for Yellowknife has been corrected from December 2002. In addition, the Yellowknife all-items Consumer Price Index (CPI) and some Yellowknife special aggregate index series have also changed. Data for Canada and all other provinces and territories were not affected.
4. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 10 The all-items Consumer Price Index, provinces, Whitehorse, Yellowknife and Iqaluit, not seasonally adjusted, historical data

1. Data for Iqaluit are on a December 2002=100 base (200212=100) and the Standard Geographical Classification (SGC) 2001. Previous to April 1, 1999, the town of Iqaluit formed part of the Northwest Territories. Subsequent to April 1, 1999, the town of Iqaluit formed part of the newly-created territory of Nunavut.
2. The annual index level is the average of the 12 individual monthly indexes.

Table 11 The Consumer Price Index and selected sub-groups, by urban centre, not seasonally adjusted

1. With the introduction of the 1992 basket in January 1995, emphasis was shifted from urban centre data to provincial data. Urban centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart is used except in the cases of Montréal, Toronto, and Vancouver, where a sub-provincial counterpart is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.
2. Users of the urban centre indexes should note that, effective July 2007, Statistics Canada has corrected the weights of some urban centres that were in error in the Consumer Price Index 2005 basket update. The weights of St. John's, Charlottetown, Halifax, Saint John, Québec City, Montréal, Ottawa, Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary and Victoria were adjusted, while those of Toronto, Vancouver, Whitehorse, Yellowknife and Iqaluit were not. With this correction, the July 2007 level of each urban centre index has been restored to reflect the correct movement for May 2007 and June 2007. The published urban centre indexes for May and June 2007 will remain unchanged. The calculation of urban centre indexes is separate from the calculation of the provincial and national indexes. Therefore, the correction made to the urban centre weights has no effect at all on the provincial or national indexes. Published weight documentation was also not affected.
3. Formerly Ottawa (Ottawa-Gatineau, Ontario part), represents Ottawa only.

Table 12 The all-items Consumer Price Index by urban centre, not seasonally adjusted, historical data

1. With the introduction of the 1992 basket in January 1995, emphasis was shifted from urban centre data to provincial data. Urban centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart is used except in the cases of Montréal, Toronto, and Vancouver, where a sub-provincial counterpart is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.
2. Users of the urban centre indexes should note that, effective July 2007, Statistics Canada has corrected the weights of some urban centres that were in error in the Consumer Price Index 2005 basket update. The weights of St. John's, Charlottetown, Halifax, Saint John, Québec City, Montréal, Ottawa, Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary and Victoria were adjusted, while those of Toronto, Vancouver, Whitehorse, Yellowknife and Iqaluit were not. With this correction, the July 2007 level of each urban centre index has been restored to reflect the correct movement for May 2007 and June 2007. The published urban centre indexes for May and June 2007 will remain unchanged. The calculation of urban centre indexes is separate from the calculation of the provincial and national indexes. Therefore, the correction made to the urban centre weights has no effect at all on the provincial or national indexes. Published weight documentation was also not affected.
3. The annual index level is the average of the 12 individual monthly indexes.
4. Formerly Ottawa (Ottawa-Gatineau, Ontario part), represents Ottawa only.

Table 14 Average retail prices, monthly, Canada

1. Prices are expressed in dollars, except for the price of gasoline which is expressed in cents per litre.

Average retail prices for food, household supplies, personal care items, cigarettes and gasoline

Table 14 shows, for the current month and the two previous months, average prices for selected food, household supplies, personal care items, cigarettes and for gasoline.

Prices for these items are collected as part of the regular monthly CPI survey. Prices for the selected food, household supply and personal care items are observed in food supermarkets, while prices for cigarettes are collected in supermarkets, department stores, drug stores and tobacco shops. Average prices for each commodity are calculated as a weighted average of the average prices in the observed urban centres using the population of these urban centres as weights.

The commodities which are priced can vary in quality between outlets or between urban centres. This is the reason why average prices are not published for each of those urban centres. Brands and outlets can also vary from month to month. Therefore, average prices may not necessarily be fully comparable from one month to another and should not be used as an appropriate measure of pure price change through time. A matched commodity and outlet sample is used for the CPI to determine the pure price movement of commodities through time.

Table 15 Inter-city indexes of retail price differentials, as of October 2008, for selected groups of consumer goods and services, not seasonally adjusted

Purpose and Scope

Table 15 shows estimates of retail price differences between 11 Canadian cities in all 10 provinces, as of October 2008. These estimates are based on a selection of commodities (goods and services) purchased by consumers in each of the 11 cities.

These estimates should not be interpreted as a measure of differences in the cost-of-living between cities. The indexes provide price comparisons for a selection of commodities only, and are not meant to give an exhaustive comparison of all goods and services purchased by consumers. Additionally, the shelter price concept used for these indexes is not conducive to making cost-of-living type comparisons between cities (see below).

Methodology

In order to produce optimal Inter-city indexes, commodity comparisons were initially made by pairing cities that are in close geographic proximity. The resulting price level comparisons were then extended to include comparisons between all of the cities, using a chaining procedure. The following initial pairings were used:

St. John's	Halifax
Charlottetown-Summerside	Halifax
Saint John	Halifax
Ottawa	Halifax
Toronto	Montréal
Ottawa	Toronto
Toronto	Winnipeg
Regina	Winnipeg
Edmonton	Winnipeg
Edmonton	Vancouver

Reliable Inter-city price comparisons require that the selected commodities be very similar across cities. This ensures that the variation in index levels between cities is due to pure price differences and not to differences in the attributes of the commodities, such as size and/or quality.

Within each city pair, commodity price quotes were matched on the basis of detailed descriptions. Whenever possible, commodities were matched by brand, quantity and with some regard for the comparability of retail outlets from which they were selected.

Additionally, the target prices for this study are final retail prices and as such, include all sales taxes and levies applied to consumer commodities within a city. This can be an important source of variation when explaining differences in inter-city price levels.

It should be noted that price data for the Inter-city indexes is drawn from the sample of monthly price data collected for the Consumer Price Index (CPI). Given that the CPI sample is optimized to produce accurate price comparisons through time, and not across regions, the number of matched price quotes between cities can be small. It should also be noted that, especially in periods when prices are highly volatile, the timing of the commodity price comparison can significantly affect city-to-city retail price relationships.

The weights used for aggregating the city indexes into the all-items Inter-city index are based on the expenditures of consumers living in each of the 11 cities. The weights are currently based on 2005 consumer expenditure data.

The all-items Inter-city index for a particular city is compared to the average of all 11 cities, which is equal to 100. For example, an index value of 102 for a particular city means that prices for the measured commodities are 2% higher than the weighted, combined city average.

Additional Information on Shelter

Shelter prices were absent from the Inter-city index program prior to 1999 because of methodological and conceptual issues associated with their measurement. The diverse nature of shelter means that accurate matches between cities are often difficult to make.

To account for some of these difficulties, a rental equivalence approach is used to construct the Inter-city price indexes for owned accommodation. Such an approach uses market rents as an approximation to the cost of the shelter services consumed by homeowners in each city. It is important to note that this approach may not be suitable for the needs of all users. For instance, since the rental equivalence approach does not represent an out-of-pocket expenditure, the indexes should not be used for measuring differences in the purchasing power of homeowners across cities.

Footnotes for Table 15

1. The weights shown are rounded 2005 basket weights at April 2007 prices for Canada. They are provided for illustration only; the weights actually used are combined city weights with adjustments for price changes up until October 2008.
2. Includes the following subgroups: sugar and syrup, confectionery items, margarine, other edible fat and oil items, coffee, tea, condiments, spices and vinegar, soup, infant and junior foods, pre-cooked frozen food preparations, non-alcoholic beverages and all other food preparations.

Gouvernement
du Canada

Canada

This publication presents the highlights and analysis of the movement of the Consumer Price Index (CPI) and its components over the month and year proceeding the reference period. It also provides a range of the most recent tables and graphs on the Canadian CPI.

The CPI is an indicator of changes in consumer prices experienced by Canadians. It is obtained by comparing through time, the cost of a fixed basket of goods and services purchased by consumers. Since the basket contains items of unchanging or equivalent quantity and quality, the index reflects only pure price movements.

A globe graphic composed of various small photographs showing diverse people and activities, with a large red maple leaf in the center. The photos include scenes of people walking, shopping, working, and socializing, representing a multicultural community.

Highlights

- Consumer prices rose 1.0% in the 12 months to June, following a 1.4% increase in May. On a seasonally adjusted monthly basis, consumer prices fell 0.2% in June, the same rate of decrease as the previous month.

Briefing notes

Highlights:

- Consumer prices rose 1.0% in the 12 months to June, following a 1.4% increase in May. On a non-seasonally adjusted monthly basis, consumer prices declined 0.1% in June, after increasing 0.3% from April to May.

All-items Consumer Price Index (CPI):

- Energy prices rose 1.3% between June 2009 and June 2010, after increasing 6.2% over the 12 months ending in May.
- The price of gasoline decreased 2.9% in June compared to the same month a year earlier, after rising 6.9% in May. This was the first year-over-year drop in prices at the pump since October 2009.
- In June, electricity prices rose 5.8%, after increasing 4.0% in May.
- Natural gas prices increased 3.0% in June, after rising 4.7% in May. This was the third consecutive increase following several months of decline.
- Prices for the purchase of passenger vehicles rose 2.8% in June, following a 5.1% increase in May.
- Prices increased in seven of the eight major components of the CPI in the 12 months to June; the only exception was clothing and footwear.

Main contributors to the 12-month change in the CPI:

Main upward contributors:

- Purchase of passenger vehicles (+2.8%)
- Passenger vehicle insurance premiums (+5.3%)
- Homeowner's replacement costs (+5.2%)
- Electricity (+5.8%)
- Telephone services (+5.4%)

Main downward contributors:

- Mortgage interest cost (-5.0%)
- Gasoline (-2.9%)
- Air transportation (-8.4%)
- Women's clothing (-5.7%)
- Video equipment (-13.9%)

Main contributors to the monthly change in the CPI, not seasonally adjusted:

Main upward contributors:

- Traveller accommodations (+7.6%)
- Air transportation (+4.5%)
- Electricity (+0.9%)
- Homeowner's replacement costs (+0.6%)
- Confectionery (+3.7%)

Main downward contributors:

- Gasoline (-2.9%)
- Women's clothing (-4.6%)
- Purchase of passenger vehicles (-1.0%)
- Men's clothing (-4.7%)
- Children's clothing (-7.0%)

Analysis

Consumer prices rose 1.0% in the 12 months to June, following a 1.4% increase in May.

Chart 1

The 12-month change in the Consumer Price Index and the CPI excluding energy

Overall, energy prices rose 1.3% between June 2009 and June 2010 after increasing 6.2% over the 12 months ending in May. Excluding energy, the Consumer Price Index (CPI) increased 0.9% in June, after posting a 1.0% increase in May.

The price of gasoline decreased 2.9% in June compared to the same month a year earlier, after rising 6.9% in May. This was the first year-over-year drop in prices at the pump since October 2009.

Chart 2
Evolution of the gasoline price index in 2009 and 2010

index (2002=100)

Natural gas prices increased 3.0% in June, after rising 4.7% in May. This was the third consecutive increase following several months of decline.

In June, electricity prices rose 5.8% after increasing 4.0% in May.

Prices for the purchase of passenger vehicles rose 2.8% in June, following a 5.1% increase in May.

12-month change: Seven of the eight CPI major components rise

Prices increased in seven of the eight major components of the CPI in the 12 months to June; the only exception was clothing and footwear.

Shelter costs rose 1.6% in the 12 months to June, after increasing 1.3% in May. Homeowner's replacement costs rose 5.2% following a 4.4% increase in May. In addition to paying higher prices for natural gas and electricity, consumers also paid more for rent.

On the other hand, the mortgage interest cost index, which measures the change in the interest portion of payments on outstanding mortgage debt, declined 5.0% in June, following a 5.4% decrease in May.

Chart 3
Transportation cost increases less than the previous month

Despite the year-over-year decline in gasoline prices, transportation costs rose 1.0% in the 12 months to June after increasing 4.1% in May. In addition to paying higher prices for the purchase of passenger vehicles, consumers also paid 5.3% more for passenger vehicle insurance premiums.

Consumers paid 1.2% more for household operations, furnishings and equipment. This increase followed a 0.9% rise in the 12 months to May. Higher prices were recorded for telephone services and child care. Costs for financial services fell 2.8%.

Food prices went up 0.7% following a 0.8% increase in May. The increase in June was the smallest since March 2008. Prices for food purchased from restaurants rose 1.8% while prices for food purchased from stores increased 0.1%. Prices increased for sugar and confectionery, tomatoes and lettuce, while prices for oranges and potatoes fell.

Prices in the health and personal care component were up 1.7%. Prices for oral-hygiene products and dental care increased.

Prices in the recreation, education and reading component rose 0.4% after falling 0.2% in the 12 months to May. Consumers paid more for cablevision and satellite services. However, prices for video equipment and computer equipment and supplies fell.

Prices for clothing and footwear declined 1.8%. In this component, lower prices were recorded for women's and children's clothing.

The provinces

Apart from Manitoba, consumer prices rose in all provinces in the 12 months to June, but at a slower pace than in May 2010. Prices at the pump fell in most provinces.

Chart 4

Ontario records the largest year-over-year increase

The fastest rate of change occurred in Ontario where consumer prices rose 1.6%. Prices for the purchase of passenger vehicles were up as were passenger vehicle insurance premiums. Ontario consumers also paid more for electricity and telephone services.

In Manitoba, consumer prices decreased 0.2% in the 12 months to June, following a 0.5% increase in May. Lower prices for gasoline, natural gas and home and mortgage insurance were recorded in this province.

In British Columbia, prices advanced 0.5% in June, following a 0.6% increase in May. Electricity prices rose 21.7% while prices for home and mortgage insurance declined.

The non-seasonally adjusted monthly CPI decreases

In June, consumer prices prior to seasonal adjustment declined 0.1%, after increasing 0.3% from April to May.

The transportation component posted a 0.7% decrease and prices in the clothing and footwear component declined 3.2% in June.

On the other hand, five of the eight major components of the CPI registered month-to-month increases in June: recreation, education and reading; shelter; food; health and personal care; and alcoholic beverages and tobacco products.

Chart 5

Five of eight CPI components increase in June, month-over-month

In June, consumers paid 2.9% less at the pump for gasoline than in May. Prices also decreased for women's and men's clothing, passenger vehicles and non-alcoholic beverages.

The cost of shelter rose 0.2%. Month-over-month increases were observed in electricity prices and homeowner's replacement costs.

The recreation, education and reading index rose 0.6% month-over-month in June. The price of traveller accommodation rose 7.6% between May and June.

Seasonally adjusted monthly CPI decreases

On a seasonally adjusted monthly basis, consumer prices fell 0.2% in June, the same rate of decrease as the previous month. Both the transportation and the clothing and footwear indexes fell 0.7% while food prices decreased 0.1%.

12-month change in the Bank of Canada's core index

The Bank of Canada's core index advanced 1.7% in the 12 months to June, following a 1.8% rise in May. Price increases were recorded for the purchase of passenger vehicles, passenger vehicle insurance premiums, homeowner's replacement costs, electricity and telephone services.

On a month-to-month basis, the core index prior to seasonal adjustment fell 0.1%, after increasing 0.3% in May.

The seasonally adjusted monthly core index increased 0.1% in June, after increasing by the same amount in May.

For further reading

Detailed information on the methodology and concepts of the CPI is contained in ***The Consumer Price Index Reference Paper, Updating Based on 1992 Expenditures***, (Occasional), catalogue no. 62-553-X.

Information regarding the Household Spending Survey is contained in the: ***Spending Patterns in Canada, 2005***, catalogue no. 62-202-X.

A brief non-technical document entitled ***Your Guide to the Consumer Price Index*** (Occasional) catalogue no. 62-557-X answers the frequently asked questions about the construction and use of the CPI.

For further information, contact the Consumer Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 (613-951-9606), or you can also search through the Statistics Canada catalogue which lists all current products and services available from Statistics Canada.

Data quality, concepts and methodology

Definition

The Consumer Price Index (CPI) is an indicator of the changes in consumer prices experienced by the target population. The CPI measures price change by comparing, through time, the cost of a fixed basket of commodities. This basket is based on the expenditures of the target population in a certain reference period, currently 2005. Since the basket contains commodities of unchanging or equivalent quantity and quality, the index reflects only pure price movements.

Separate CPIs are published for Canada, the ten provinces, Whitehorse, Yellowknife and Iqaluit. Some CPI information is also available for an additional sixteen urban centres. Since the CPI is a measure of price change from one time period to another, it cannot be used to indicate differences in price levels between provinces or urban centres.

Population coverage

The population targeted by the CPI consists of families and individuals living in urban and rural private households. For practical reasons, residents of the Territories outside Whitehorse, Yellowknife and Iqaluit are not represented by the index. Prior to February 1995, the target population consisted of private households in Canadian urban centres with a population of 30,000 or more.

Time reference

The CPI compares, in percentage terms, prices in any given time period to prices in the official base period which, at present, is 2002=100. The official time base was changed from 1992=100 to 2002=100 starting with the CPI for May 2007. The change is strictly an arithmetic conversion which alters the index levels but leaves the percentage changes between any two periods intact, except for differences in rounding.

Percent versus index point changes

The movements of the indexes from one month to another are expressed as percent changes rather than changes in index points. Index point changes are affected by the level of the index which, in turn, depends on the time base of the particular index. The percentage change between any two time periods can be readily calculated by dividing the index point difference between the two time periods by the index for the earlier period and multiplying the result by one hundred.

Price coverage

The prices used in the CPI calculation are final prices, inclusive of excise and other indirect taxes paid by consumers. In particular, they include the Goods and Services Tax (GST), as well as provincial retail sales taxes wherever applicable. In regions where the GST and provincial retail sales taxes have been combined, the Harmonized Sales Tax (HST) is included. It follows that the CPI can change as a result of modifications to any of these taxes.

The selection of commodities and the outlets from which prices are collected is judgmental, other than for rents and traveler accommodation. The number of prices required for a given commodity depends on the importance and the nature of the commodity. The samples are designed to represent volume selling commodities and outlets.

The principal objective of the sample design is to ensure an informative, reliable and impartial picture of consumer inflation at the national and provincial levels.

Price collection for a given month's index is carried out during the first three weeks of the month. Although prices for most CPI commodities are collected monthly, prices for commodities having less frequent price changes (e.g. property taxes and electricity rates) are collected at intervals longer than one month. Special pricings are carried out where there is evidence that significant price changes have occurred between scheduled pricing periods.

Weights and linking

The CPI maintains fixed quantitative proportions (weights) between commodities during the life of a given basket. The baskets are updated periodically to take into account changes in consumer expenditure patterns. In May 2007, the basket reflecting the 2005 expenditure patterns replaced the 2001 basket. The continuity of the CPI series is maintained by "linking" the corresponding indexes obtained from consecutive baskets.

The CPI is calculated as a weighted average of specified commodity price indexes. The weights are derived from Survey of Household Spending data. Text table 1 compares the expenditure shares of the two most recent CPI baskets, i.e. the 2005 basket as it was reflected in the CPI in May 2007 and the 2001 basket. Because both sets of weights are expressed in April 2007 or "link month" prices, the differences reflect the shifts in the relative quantities purchased between the two baskets.

When reconstructing or re-aggregating published CPI series, the changes in weights and the linking procedures must be taken into account. For a description of the methodology required to reconstruct or re-aggregate CPI series, see **The Consumer Price Index Reference Paper** catalogue no. 62-553-X (Occasional) or contact Consumer Prices Division.

Text table 1

Comparison of the 2005 and 2001 distribution¹ of expenditures used in the Consumer Price Index, by major component, for Canada

	2005 Expenditures		2001 Expenditures
	Expressed in 2005 prices	Expressed in April 2007 prices	Expressed in April 2007 prices
	percent		
Major Components			
All-items	100.0	100.0	100.0
Food	16.9	17.0	17.1
Shelter	25.7	26.6	27.7
Household operations, furnishings and equipment	11.4	11.1	10.2
Clothing and footwear	5.6	5.4	5.1
Transportation	19.6	19.9	20.2
Health and personal care	4.8	4.7	4.4
Recreation, education and reading	13.0	12.2	11.2
Alcoholic beverages and tobacco products	3.1	3.1	4.2

1. Figures may not add to 100% due to rounding.

Starting with the October 2006 Consumer Price Index (CPI), Statistics Canada produces and disseminates the Core CPI as defined by the Bank of Canada.

The measure of Core CPI excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on Core CPI, please consult the Bank of Canada Web site. <http://www.bankofcanada.ca/en/inflation/index.htm>.

Statistics Canada also calculates, on behalf of the Bank of Canada, a seasonally adjusted Core CPI. This series is available through CANSIM, Statistics Canada's official database, or by contacting us through the means mentioned on the inside cover of this publication.

Whitehorse, Yellowknife and Iqaluit indexes

The relatively small size of the housing market in these three cities makes it difficult to construct reliable price indexes for new houses. To compensate, the price movements of rental accommodation are used to approximate the price movements of new houses. The rent information itself is collected using different pricing frequencies and collection methods than in the rest of the country. Because of these problems, the indexes for Rented Accommodation and Owned Accommodation are not published for these three cities. Further, the all-items indexes published for these three cities are not strictly comparable with the same indexes for the provinces or the other sixteen cities.

Calculation of urban centre indexes

With the introduction of the 1992 basket, emphasis was shifted from urban centre data to provincial data. Urban Centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of Shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart (or, in the cases of Montréal, Toronto, and Vancouver, a sub-provincial counterpart) is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.

Seasonal adjustment

A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as variations in climate and regular institutional events such as vacations and statutory holidays. Seasonally adjusted series are calculated using Statistics Canada's X-12 ARIMA program. Time series with no detectable seasonal movements remain unchanged from the official series. The official unadjusted series for all-items index, core consumer price index, each of the eight major component indexes and three special aggregates (all-items excluding food, all-items excluding food and energy and all-items excluding 8 of the most volatile components (Bank of Canada definition)) are seasonally adjusted independently.

Each month, the previous month's seasonally adjusted index is subject to revision. On an annual basis, the seasonally adjusted values for the last three years are revised with the January data release. Since these revisions can lead to changes in both the levels and movements of the indexes, users employing the CPI for indexation purposes are advised to use the unadjusted indexes.

2. Figures may not add to 100% due to rounding.
3. The measure of core Consumer Price Index (CPI) excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on core CPI, please consult the Bank of Canada Web site: <http://www.bankofcanada.ca/en/inflation/index.htm>.

Table 3 The Consumer Price Index, provinces, Whitehorse, Yellowknife and Iqaluit, not seasonally adjusted

1. Data for Iqaluit are on a December 2002=100 base (200212=100) and the Standard Geographical Classification (SGC) 2001. Previous to April 1, 1999, the town of Iqaluit formed part of the Northwest Territories. Subsequent to April 1, 1999, the town of Iqaluit formed part of the newly-created territory of Nunavut.

Table 4 The Consumer Price Index, major components and selected sub-groups, Canada, not seasonally adjusted

Table 4-1

1. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.

Table 4-2

1. In July 2004, the 2001 basket weights introduced with the January 2003 data were adjusted; the weights for mortgage interest cost were re-evaluated.
2. Due to changes in the Ontario electricity market that became effective May 1, 2002, it was necessary to adjust the treatment of electricity prices in the Consumer Price Index (CPI) for that province. A question and answer fact sheet that explains those changes is now available. To obtain the fact sheet on the treatment of electricity prices in Ontario, please contact CPD Dissemination Unit, Consumer Prices Division, telephone: (613) 951-9606, toll-free: 1-866-230-2248, fax: (613) 951-2848, e-mail: cpd-info-dpc@statcan.gc.ca.

Table 4-5

1. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 4-7

1. From April 2006, Statistics Canada changed its implementation of the price index formula used for traveller accommodation. As a result, data from April 2006 are not strictly comparable to earlier time periods.

Table 5 The Consumer Price Index for Canada, all-items, not seasonally adjusted, historical data

1. The annual average index is calculated as the average of the published 12 individual monthly indexes, rounded to one decimal place. Percentage changes between the annual average indexes are calculated based on these published rounded numbers. Between May 2007 and September 2007, the annual average percentage changes in Table 5 were calculated based on annual average indexes that were not rounded. As a result, some percentage changes were different by +/- 0.1 from the official percentage change. This problem only affected the annual average column of Table 5.

Table 6 Core Consumer Price Index (CPI) (Bank of Canada definition), not seasonally adjusted, historical data

1. The measure of core Consumer Price Index (CPI) excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on core CPI, please consult the Bank of Canada Web site: <http://www.bankofcanada.ca/en/inflation/index.htm>.
2. The annual average index is calculated as the average of the published 12 individual monthly indexes, rounded to one decimal place. Percentage changes between the annual average indexes are calculated based on these published rounded numbers.

Table 7 The Consumer Price Index for Canada, major components and special aggregates, not seasonally adjusted, historical data

1. Goods are physical or tangible commodities usually classified according to their life span into non-durable goods, semi-durable goods and durable goods. Non-durable goods are those goods that can be used up entirely in less than a year, assuming normal usage. For example, fresh food products, disposable cameras and gasoline are non-durable goods. Semi-durable goods are those goods that may last less than 12 months or greater than 12 months depending on the purpose to which they are put. For example, clothing, footwear and household textiles are semi-durable goods. Durable goods are those goods which may be used repeatedly or continuously over more than a year, assuming normal usage. For example, cars, audio and video equipment and furniture are durable goods.
2. A service in the Consumer Price Index (CPI) is characterized by valuable work performed by an individual or organization on behalf of a consumer, for example, car tune-ups, haircuts and city public transportation. Transactions classified as a service may include the cost of goods by their nature. Examples include food in restaurant food services and materials in clothing repair services.
3. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".

4. The annual index level is the average of the 12 individual monthly indexes.

Table 8 Annual average percentage changes for the Consumer Price Index

Table 8-1 and 8-2

1. The annual index level is the average of the 12 individual monthly indexes. The percentage change for a given calendar year is calculated using the annual average indexes.

4. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 9-12

1. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".

2. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.
3. Part of the increase first recorded in the shelter index for Yellowknife for December 2004 inadvertently reflected rent increases that actually occurred earlier. As a result, the change in the shelter index was overstated in December 2004, and was understated in the previous two years. The shelter index series for Yellowknife has been corrected from December 2002. In addition, the Yellowknife all-items Consumer Price Index (CPI) and some Yellowknife special aggregate index series have also changed. Data for Canada and all other provinces and territories were not affected.
4. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 10 The all-items Consumer Price Index, provinces, Whitehorse, Yellowknife and Iqaluit, not seasonally adjusted, historical data

1. Data for Iqaluit are on a December 2002=100 base (200212=100) and the Standard Geographical Classification (SGC) 2001. Previous to April 1, 1999, the town of Iqaluit formed part of the Northwest Territories. Subsequent to April 1, 1999, the town of Iqaluit formed part of the newly-created territory of Nunavut.
2. The annual index level is the average of the 12 individual monthly indexes.

Table 11 The Consumer Price Index and selected sub-groups, by urban centre, not seasonally adjusted

1. With the introduction of the 1992 basket in January 1995, emphasis was shifted from urban centre data to provincial data. Urban centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart is used except in the cases of Montréal, Toronto, and Vancouver, where a sub-provincial counterpart is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.
2. Users of the urban centre indexes should note that, effective July 2007, Statistics Canada has corrected the weights of some urban centres that were in error in the Consumer Price Index 2005 basket update. The weights of St. John's, Charlottetown, Halifax, Saint John, Québec City, Montréal, Ottawa, Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary and Victoria were adjusted, while those of Toronto, Vancouver, Whitehorse, Yellowknife and Iqaluit were not. With this correction, the July 2007 level of each urban centre index has been restored to reflect the correct movement for May 2007 and June 2007. The published urban centre indexes for May and June 2007 will remain unchanged. The calculation of urban centre indexes is separate from the calculation of the provincial and national indexes. Therefore, the correction made to the urban centre weights has no effect at all on the provincial or national indexes. Published weight documentation was also not affected.
3. Formerly Ottawa (Ottawa-Gatineau, Ontario part), represents Ottawa only.

Table 12 The all-items Consumer Price Index by urban centre, not seasonally adjusted, historical data

1. With the introduction of the 1992 basket in January 1995, emphasis was shifted from urban centre data to provincial data. Urban centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart is used except in the cases of Montréal, Toronto, and Vancouver, where a sub-provincial counterpart is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.
2. Users of the urban centre indexes should note that, effective July 2007, Statistics Canada has corrected the weights of some urban centres that were in error in the Consumer Price Index 2005 basket update. The weights of St. John's, Charlottetown, Halifax, Saint John, Québec City, Montréal, Ottawa, Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary and Victoria were adjusted, while those of Toronto, Vancouver, Whitehorse, Yellowknife and Iqaluit were not. With this correction, the July 2007 level of each urban centre index has been restored to reflect the correct movement for May 2007 and June 2007. The published urban centre indexes for May and June 2007 will remain unchanged. The calculation of urban centre indexes is separate from the calculation of the provincial and national indexes. Therefore, the correction made to the urban centre weights has no effect at all on the provincial or national indexes. Published weight documentation was also not affected.
3. The annual index level is the average of the 12 individual monthly indexes.
4. Formerly Ottawa (Ottawa-Gatineau, Ontario part), represents Ottawa only.

Table 14 Average retail prices, monthly, Canada

1. Prices are expressed in dollars, except for the price of gasoline which is expressed in cents per litre.

Average retail prices for food, household supplies, personal care items, cigarettes and gasoline

Table 14 shows, for the current month and the two previous months, average prices for selected food, household supplies, personal care items, cigarettes and for gasoline.

Prices for these items are collected as part of the regular monthly CPI survey. Prices for the selected food, household supply and personal care items are observed in food supermarkets, while prices for cigarettes are collected in supermarkets, department stores, drug stores and tobacco shops. Average prices for each commodity are calculated as a weighted average of the average prices in the observed urban centres using the population of these urban centres as weights.

The commodities which are priced can vary in quality between outlets or between urban centres. This is the reason why average prices are not published for each of those urban centres. Brands and outlets can also vary from month to month. Therefore, average prices may not necessarily be fully comparable from one month to another and should not be used as an appropriate measure of pure price change through time. A matched commodity and outlet sample is used for the CPI to determine the pure price movement of commodities through time.

Table 15 Inter-city indexes of retail price differentials, as of October 2008, for selected groups of consumer goods and services

Purpose and Scope

Table 15 shows estimates of retail price differences between 11 Canadian cities in all 10 provinces, as of October 2008. These estimates are based on a selection of commodities (goods and services) purchased by consumers in each of the 11 cities.

These estimates should not be interpreted as a measure of differences in the cost-of-living between cities. The indexes provide price comparisons for a selection of commodities only, and are not meant to give an exhaustive comparison of all goods and services purchased by consumers. Additionally, the shelter price concept used for these indexes is not conducive to making cost-of-living type comparisons between cities (see below).

Methodology

In order to produce optimal Inter-city indexes, commodity comparisons were initially made by pairing cities that are in close geographic proximity. The resulting price level comparisons were then extended to include comparisons between all of the cities, using a chaining procedure. The following initial pairings were used:

St. John's	Halifax
Charlottetown-Summerside	Halifax
Saint John	Halifax
Ottawa	Halifax
Toronto	Montréal
Ottawa	Toronto
Toronto	Winnipeg
Regina	Winnipeg
Edmonton	Winnipeg
Edmonton	Vancouver

Reliable Inter-city price comparisons require that the selected commodities be very similar across cities. This ensures that the variation in index levels between cities is due to pure price differences and not to differences in the attributes of the commodities, such as size and/or quality.

Within each city pair, commodity price quotes were matched on the basis of detailed descriptions. Whenever possible, commodities were matched by brand, quantity and with some regard for the comparability of retail outlets from which they were selected.

Additionally, the target prices for this study are final retail prices and as such, include all sales taxes and levies applied to consumer commodities within a city. This can be an important source of variation when explaining differences in inter-city price levels.

It should be noted that price data for the Inter-city indexes is drawn from the sample of monthly price data collected for the Consumer Price Index (CPI). Given that the CPI sample is optimized to produce accurate price comparisons through time, and not across regions, the number of matched price quotes between cities can be small. It should also be noted that, especially in periods when prices are highly volatile, the timing of the commodity price comparison can significantly affect city-to-city retail price relationships.

The weights used for aggregating the city indexes into the all-items Inter-city index are based on the expenditures of consumers living in each of the 11 cities. The weights are currently based on 2005 consumer expenditure data.

The all-items Inter-city index for a particular city is compared to the average of all 11 cities, which is equal to 100. For example, an index value of 102 for a particular city means that prices for the measured commodities are 2% higher than the weighted, combined city average.

Additional Information on Shelter

Shelter prices were absent from the Inter-city index program prior to 1999 because of methodological and conceptual issues associated with their measurement. The diverse nature of shelter means that accurate matches between cities are often difficult to make.

To account for some of these difficulties, a rental equivalence approach is used to construct the Inter-city price indexes for owned accommodation. Such an approach uses market rents as an approximation to the cost of the shelter services consumed by homeowners in each city. It is important to note that this approach may not be suitable for the needs of all users. For instance, since the rental equivalence approach does not represent an out-of-pocket expenditure, the indexes should not be used for measuring differences in the purchasing power of homeowners across cities.

Footnotes for Table 15

1. The weights shown are rounded 2005 basket weights at April 2007 prices for Canada. They are provided for illustration only; the weights actually used are combined city weights with adjustments for price changes up until October 2008.
2. Includes the following subgroups: sugar and syrup, confectionery items, margarine, other edible fat and oil items, coffee, tea, condiments, spices and vinegar, soup, infant and junior foods, pre-cooked frozen food preparations, non-alcoholic beverages and all other food preparations.

The Consumer Price Index

This publication presents the highlights and analysis of the movement of the Consumer Price Index (CPI) and its components over the month and year proceeding the reference period. It also provides a range of the most recent tables and graphs on the Canadian CPI.

Detailed CPIs are published simultaneously for Canada, the ten provinces, Whitehorse and Yellowknife. In addition, some information is available for some cities across Canada. The Consumer Price Index for a given month is usually published in the third week of the following month, and it is not revised once it has been published.

The CPI is an indicator of changes in consumer prices experienced by Canadians. It is obtained by comparing through time, the cost of a fixed basket of goods and services purchased by consumers. Since the basket contains items of unchanging or equivalent quantity and quality, the index reflects only pure price movements.

The CPI is an important indicator of how the Canadian economy is performing. This index, used by governments, businesses and private citizens, can affect interest rates, taxes, wages, pensions, and many other monetary transfers.
